

PITCH!

is an iconic interactive sculpture, designed in a manner to respect the history and culture of the area while making notable contribution to the urban renewal and evolving character of St Kilda. Our approach to the design of St Kilda Triangle land sculpture takes advantage of the unique location and is a blended response to both its past-present and future character of the area.

The sculpture draws inspiration from St Kilda's vibrant jazz and dance scene through its visual form and composition. It reinterprets music into three dimensional forms, expressing itself in the form of soundwaves through its variation in height and orientation.

Soundwave

Varying tilt of individual glass panels

Field

Variation in height to protect important vistas towards the coast

Glass panel directing views toward points of interest

A TRANSPARENT SCULPTURE

Composition of the sculpture is carefully curated to protect important vistas between The Esplanade and the beach. Glass panels are designed with varying heights and orientations to direct views to important points of interest across the area. The use of clear glass blends the sculpture seamlessly into its surroundings, scattering lights yet minimizes obstruction of views from all angles.
