

- 19m height turbine generator
- Remotely charges surrounding devices (Nano Crystal Electricity)
- Satellite communication device to get updates on weather forecast and using it for making the decision of shifting from wind to solar or vice versa
- Wi-Fi router providing internet connection to people around
- Produces electricity continuously without any break
- Minimal disruption to the natural condition
- The turbine is not only a wind turbine it also serves the purpose of solar panel when there is no wind nearby. In sunny days its three attached blades open to expose the solar panels to use solar energy to generate electricity
- It casts bigger shadow in sunny hot days
