

- The double-layered structure adds to the layering of Daylight Shed and also gives it the ability to purify rainwater. When rain falls on the shed, the upper and lower layers both play a role. The impurities in the rain are left behind, and fresh water is fed back to the earth.
- The combination of high technology and art has given us the simplicity and beauty of our work. This is a new way to solve the energy shortage problem in the future. Landmark buildings have given the people of Melbourne a feeling of beauty and are also contributing to the city's public electricity use.
