

As artists, we strive to offer people new ways of experiencing the world, and present ideas in ways that change their common perceptions. Our goal in the context of the *Land Art Generator Initiative* is to show people that sustainable energy can be more than just a windmill and does not have to come at the cost of their scenic views or social spaces. Rather, it can stimulate their senses, enrich their experiences of space and challenge their understanding of place.

Weaving itself into the fabric of the cityscape, *Glass Boulders* engages people with the terrain as it reflects the natural geological processes of its coastal surroundings. Recognising the urgency to adopt sustainable practice in the face of climate change, the structure creates a clean energy landscape that can stand the test of time, as a testament to adaptive modular design.
