

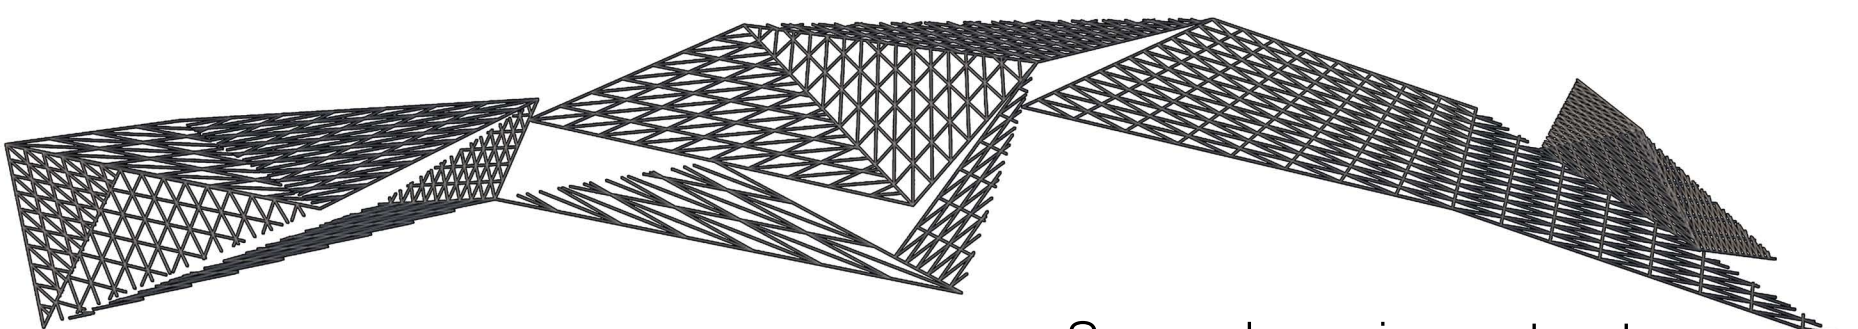

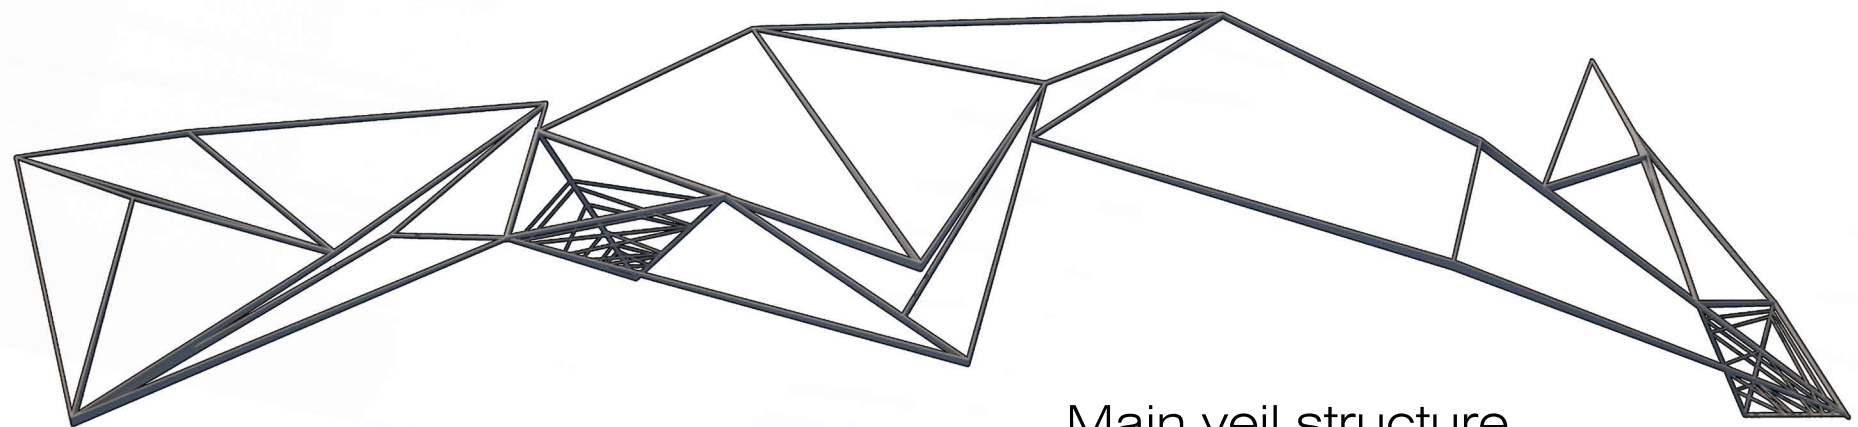

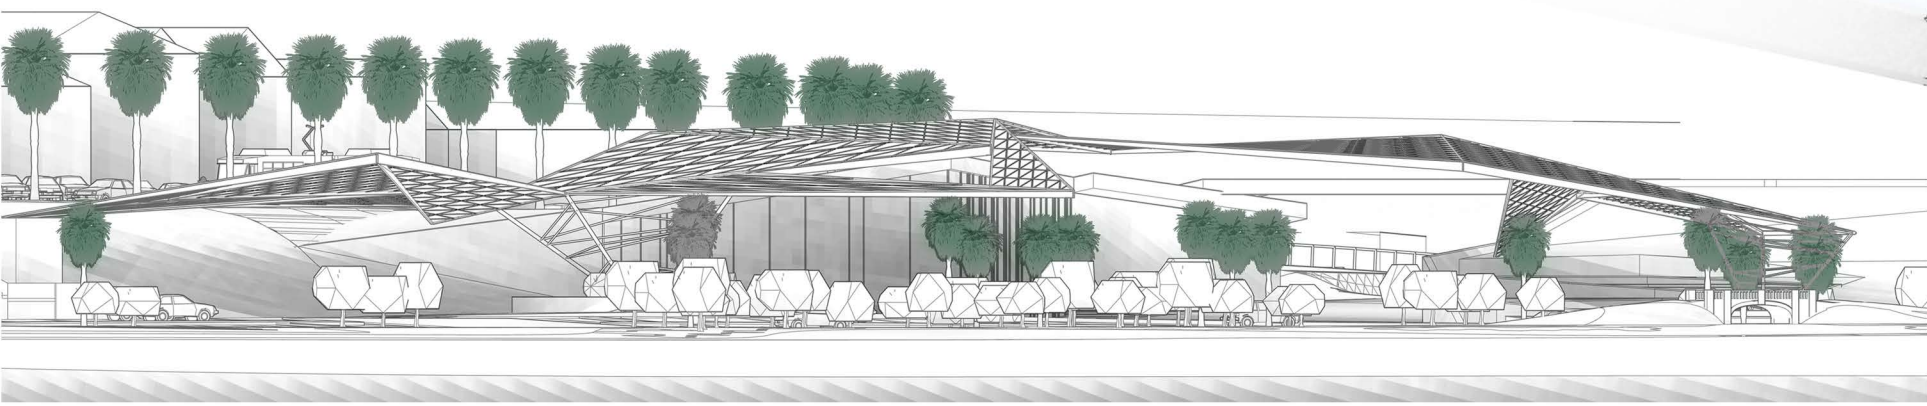

Photovoltaic panel system

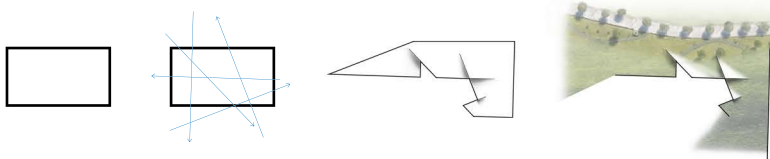

Secondary piezo-structure

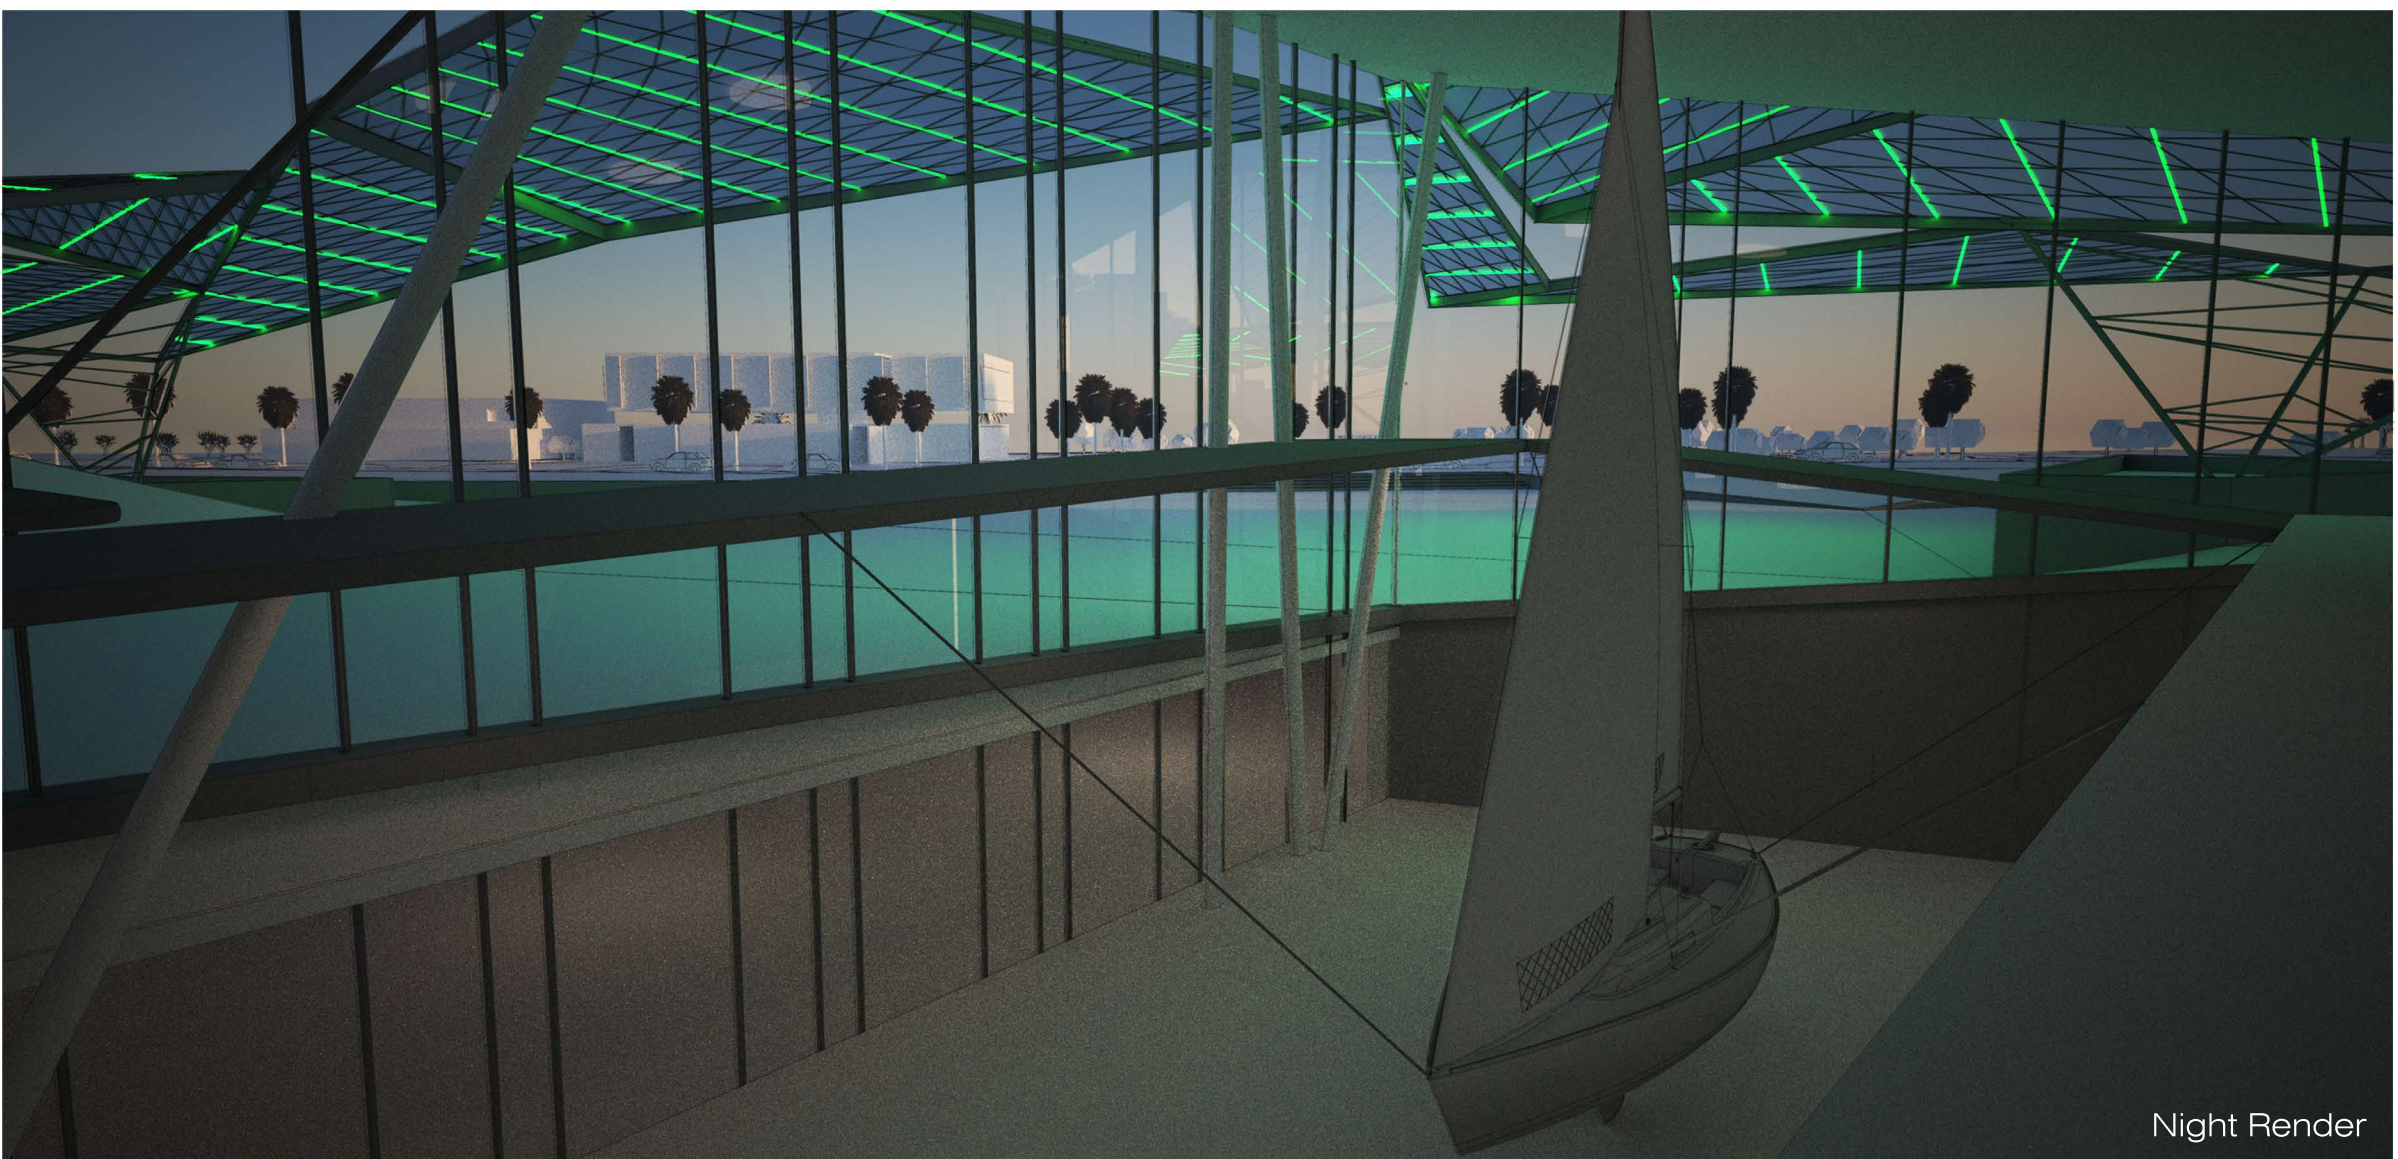

Main veil structure

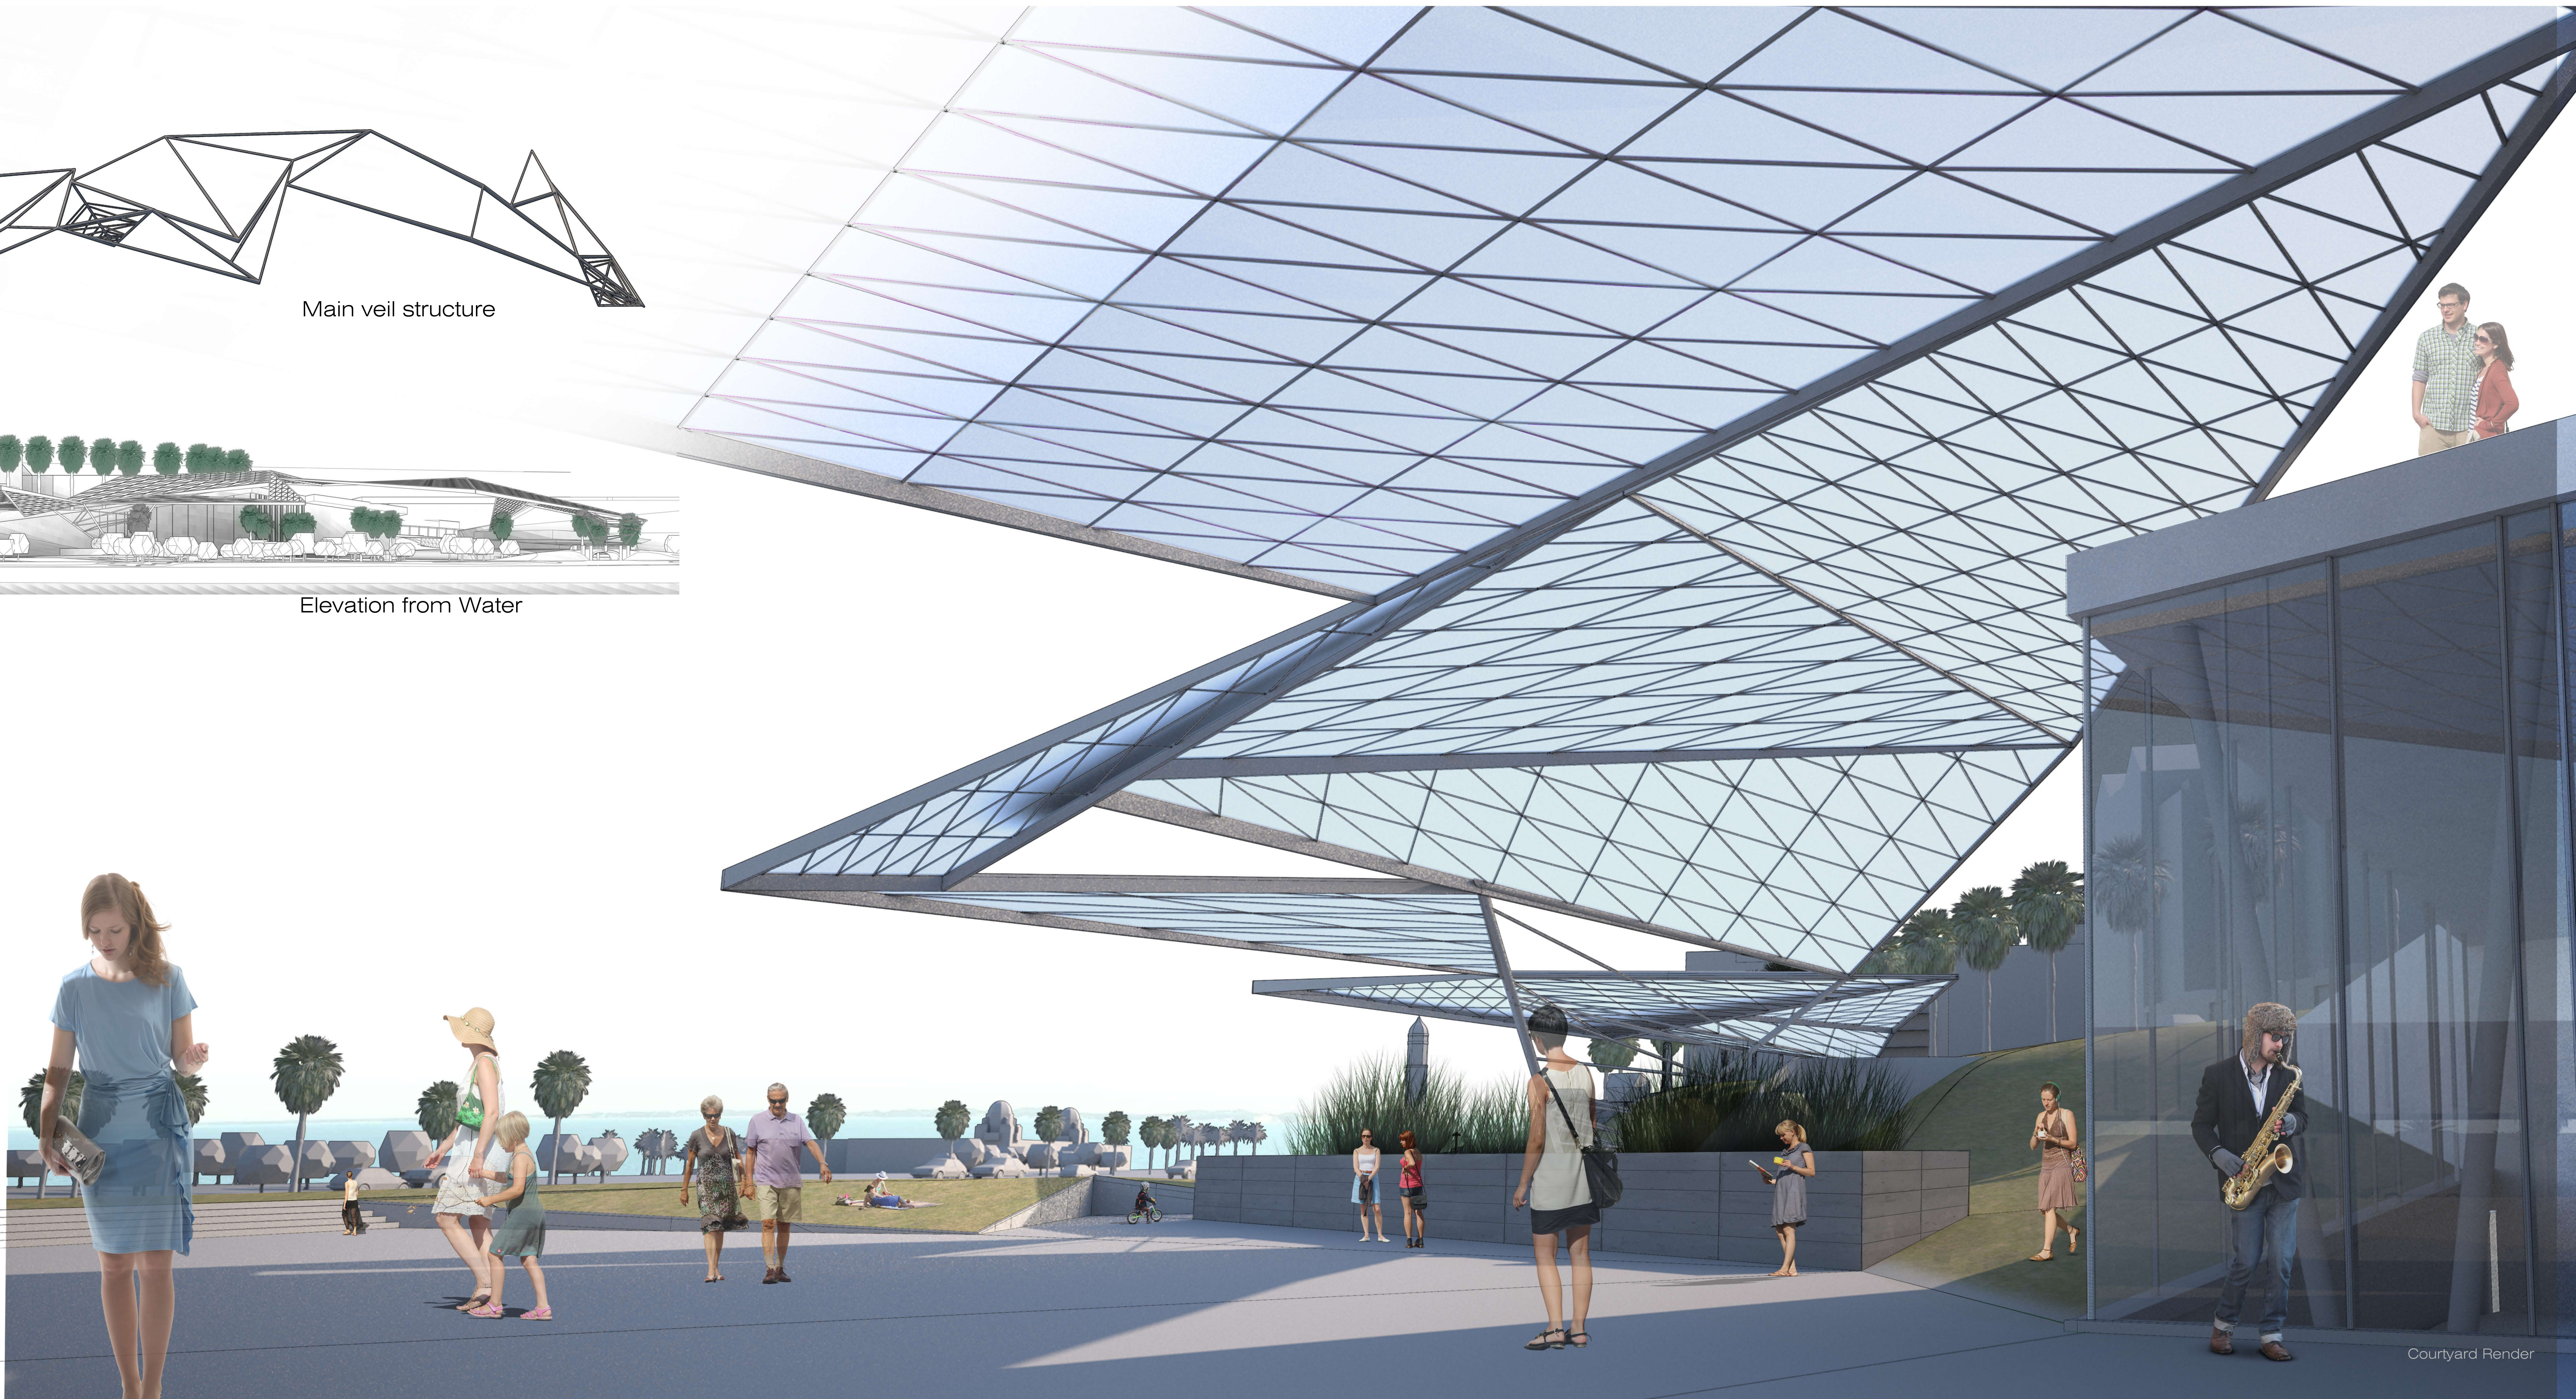

Elevation from Water

It was important for the veil to act as a piece of art in its own right while also being adaptable to what the community needs at a given moment. The Veil provides the practical purpose of providing shade and energy for the site while the program is open to the interpretation of the user. While the ground manipulation hints at the possibilities, this elegant sail is able to house any sort of event from concerts to car shows.
