

THE COLORFUL NUDIS OF PORT PHILLIPS BAY

Nudibranchs are seaslugs, ubiquitous throughout the world, and drastically different in color and shape. Many have adapted to different conditions and have developed unique colors and survival mechanisms.... some can even transform the sun's rays into energy!

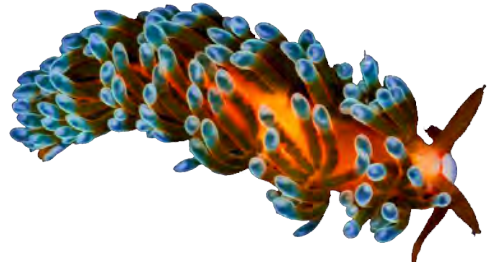

NUDIS OF THE WILD

Name: Polycera janjuka
Length: 2cm

Name: Tambja verconia
Length: 12cm

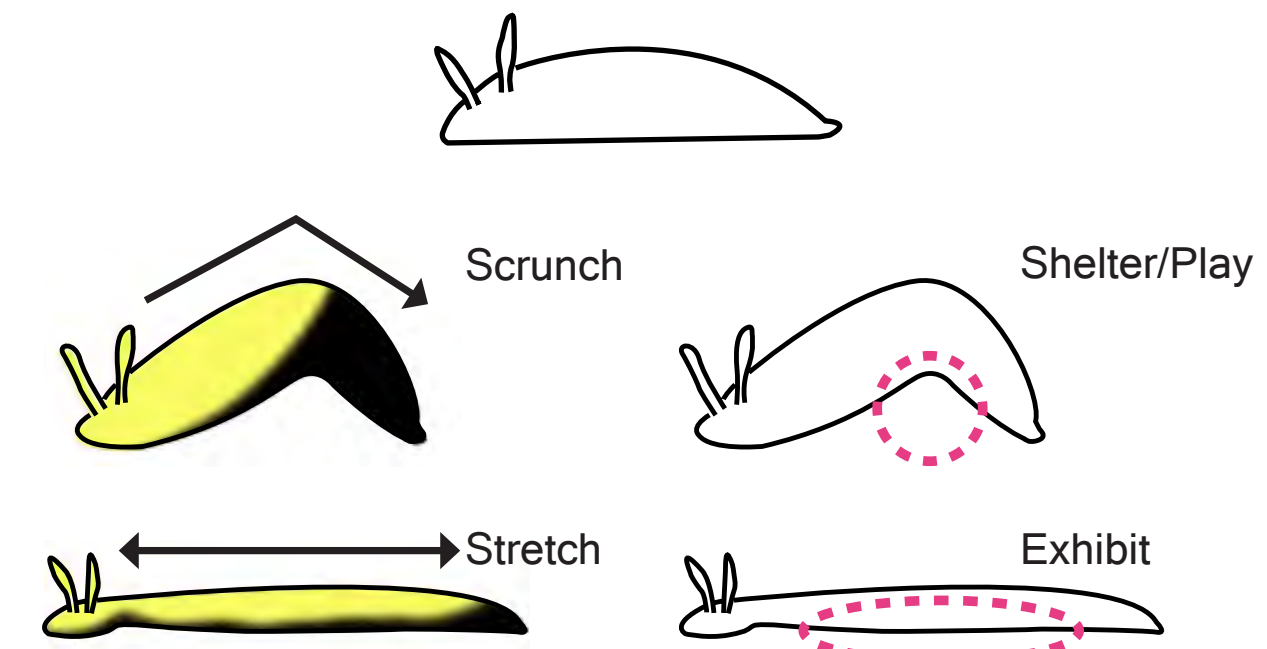

Name: Burnaia helicochorda
Length: 3cm

Name: Flabellina poenicia
Length: 2cm

FORM & FUNCTION

To maximize solar gain, the Nudi structures are either laying down or sloped towards the sun. Additionally, the panels track the light increasing light absorption and giving and live-like quality to the Nudis's skin.

MATERIALS

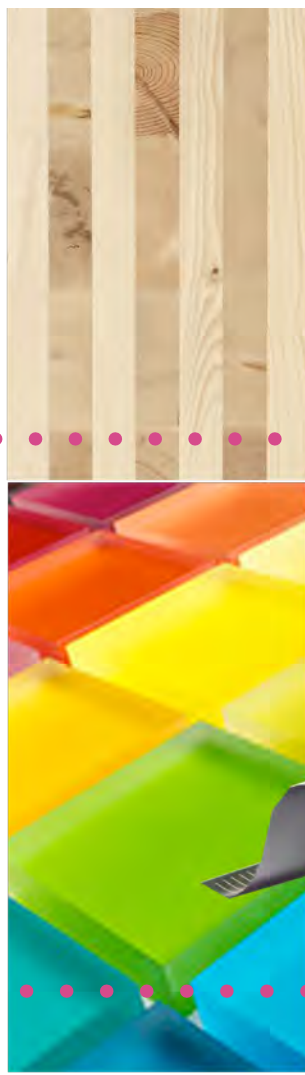

Ship Building

Plastic Polluters

Battery Recycling

Wood Framing

Thin Film Solar Panels

Lead Batteries
