

Third, the floor of the flyover can be used to generate power generating floors. When people play activities on flyovers, they can also participate in the creation of green energy. The other side rails of the flyover are gyro shaped to collect wind power to generate electricity. At the same time, to satisfy the curiosity of children in play, they also generate electricity when they move their bearings.

The new device should not only be a work of art, but also needs participation and use by the public.

Solar power: 171,000KW / H/ YEAR
