The main goal of designing indoor botanic garden is to connect visitors with nature and by providing different level platforms they will have a possibility to observe nature from a different perspective. Around the indoor arboretum, the photovoltaic structure is open in both sides that will provide a secondary circulation from the residential and light industrial zones.

The plant selection of arboretum includes: Date palm, Limonium stocksii, Aristida mutabilis, Frangipini, tropical hibiscus, verbena encelsoides, Limon trees, Orchid species, bromeliad species, Rhipsalis species, Yellow trumpet flower, Arta, neomarica gracilis etc.

Sculptural Garden

The sculptural garden that mimics the flow of the main structure provides a semi-open, semi-close space for children. The platform will take the children to the 9ft high viewpoint that will provide an opportunity to observe the space from different perspectives and enjoy with a view of the green wall, sculptural shapes and open views to the sky.
