

# SOLAR EXPLOITATION

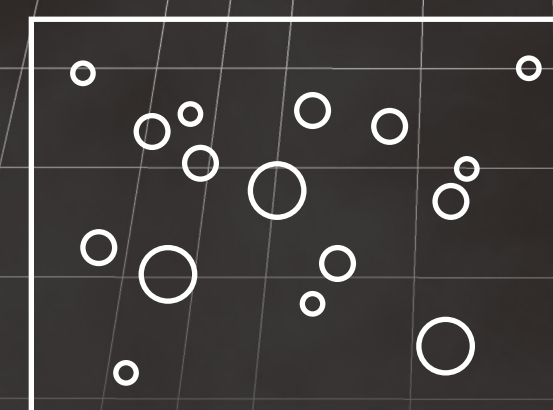

## [ SPATIAL OPERATION ]

1. an ecological forest
2. divide into three part and invert the middle one
3. collage the imaginary bottom—fossil fuel, and the real "bottom"—solar panel, into the same elevation, means fossil fuel = solar panel, which will create a spatial metaphor

## [ CONCEPT DIAGRAM ]

[petroleum = solar panel]  
Petroleum and solar panel play the similar role in transfer and store solar power

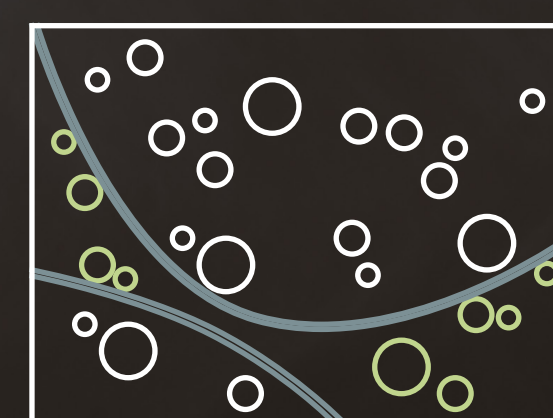

## [ ENERGY CONSERVATION I ]

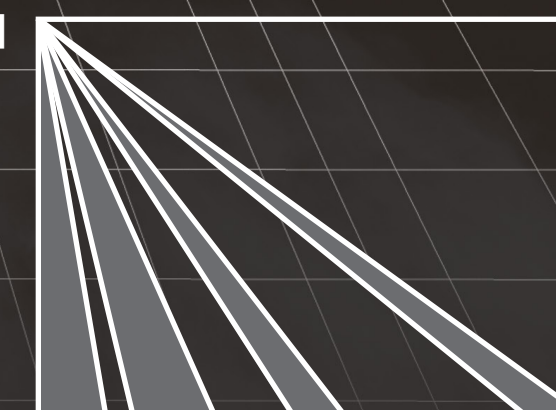

1a  
Rain and vapour dispersed in the air

1b  
The rain captured by facilities and collected in the water tank underground

1c  
The hot wind generates condensate in the water tank due to the cool environment by the rain

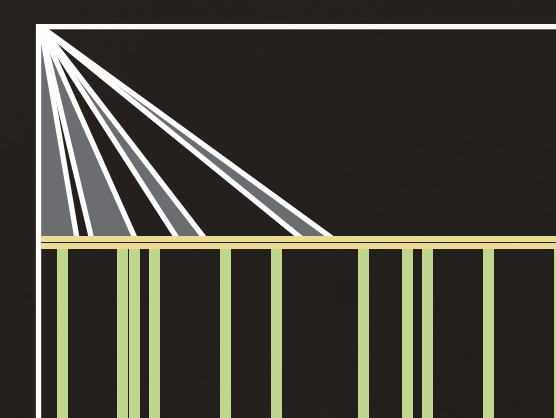

## [ ENERGY CONSERVATION II ]

2a  
The sun gives the heat and light to the earth as gift.

2b  
Its heat and light are received by the solar panel.

2c  
Solar panels restore the energy, transform it as electricity and bring it to the human beings.
