Suspended Gardens

Our proposal is based on the indigenous urban design and traditional architecture of the region. Suspended Gardens is a solution for a society that is built on social and environmental connection with the main principle of using natural resources. New technologies and innovative ideas are added to further complete the original design.

In Abu Dhabi and many other cities the principals of using the natural resources have been followed and resulted in a comfortable environment. These solutions are the best and most natural way of obtaining the comfort in social connections for the people in that region. They are offering efficiency while providing comfort.

In Suspended Gardens, design strategies in terms of energy efficiency have been considered based on proper building form, material selection and orientation. With the idea of using natural energy and vernaculars and combining them with the new technologies we are showing how traditional architectural solutions can be advantageous in a climate responsive design.

Preserving the identity and special characteristics of a place requires in-depth understanding of the natural systems in place and immersion into the time-tested cultural responses to that environment’s assets and liabilities.
