

THE WINGS OF THE FUTURE

One of the most sustainable cities in the world, Masdar is a future city that integrates technology, energy and development. It will become the focus of the world, which will be a great challenge for this design. How we put up a permanent sculpture in a city with advanced technology, it will be remembered by the people. The previous technology will always be replaced by more advanced technology, so when we use the most advanced technology to produce the alien sculpture, it will be replaced by more advanced sculpture one day. So what is eternity? What is eternal is only the spiritual faith solidified in the Abu Dhabi nation.

Abu Dhabi's most precious animal, the king of the sky, the falcon, spread its wings and soar in the sky through time and space, witnessing Abu Dhabi's past and future. When the falcon flies over the dome of the mosque, we will all become its devout messenger, delivering to the future the spirit and faith solidified in the nation.
