

# THE DANCER OF THE WIND AND THE SUN

Expose the art, under the concept of sustainability.

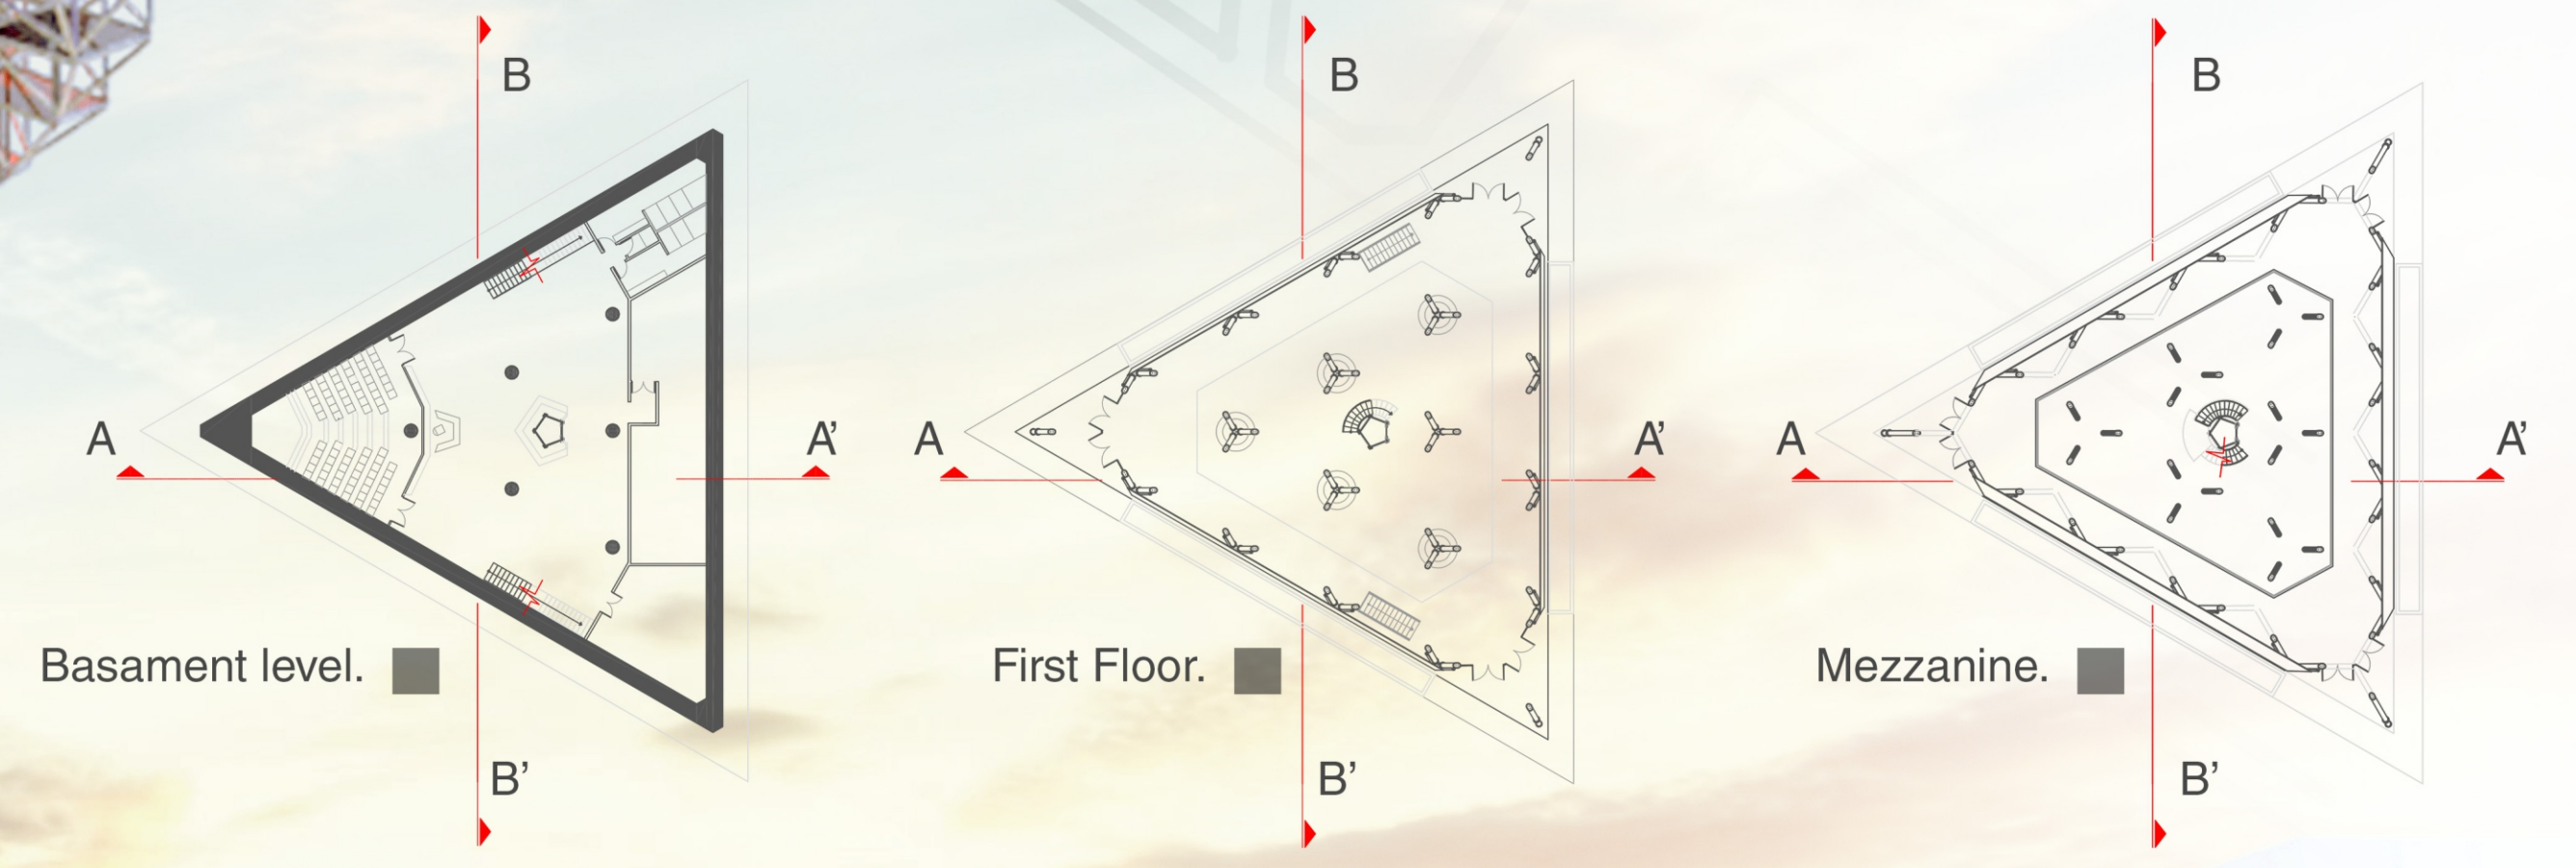

it's a work that combine the art of physichromy and science, seeks to take advantage of one of th most significant elements of the Abu Dabi Region, these are the wind and sunlight,using them as resouces in favor of sustentability and the plastic.

Tetrahedron conformation as more solid elements in structures.

The concept of the structure is based on the tetraedral composition as the most resistant element of material, whose articulation generates modules that allow the work to grow or decrease accorring to the needs and requisiments of the moment.
