

The WAHA project fits in the requirements of Masdar City's Master Plan, thus making a step forward in the ecological path in which the Emirate of Abu Dhabi is committed. The WAHA uses elements of its natural environment to produce, in an artistic way, green electricity that provides homes and the ecological transport system recently installed by the Emirate. The WAHA is also a singular public space in the city, where people can enjoy walking, learning and awakening to science and renewable energies. The term «WAHA», in arabic, means «Oasis». We wanted to create an oasis, in heart of Masdar City, where Art and Technology complete each other.

THE WAHA
