

Rotating parts create a shadow play at day

Thin film solar panels

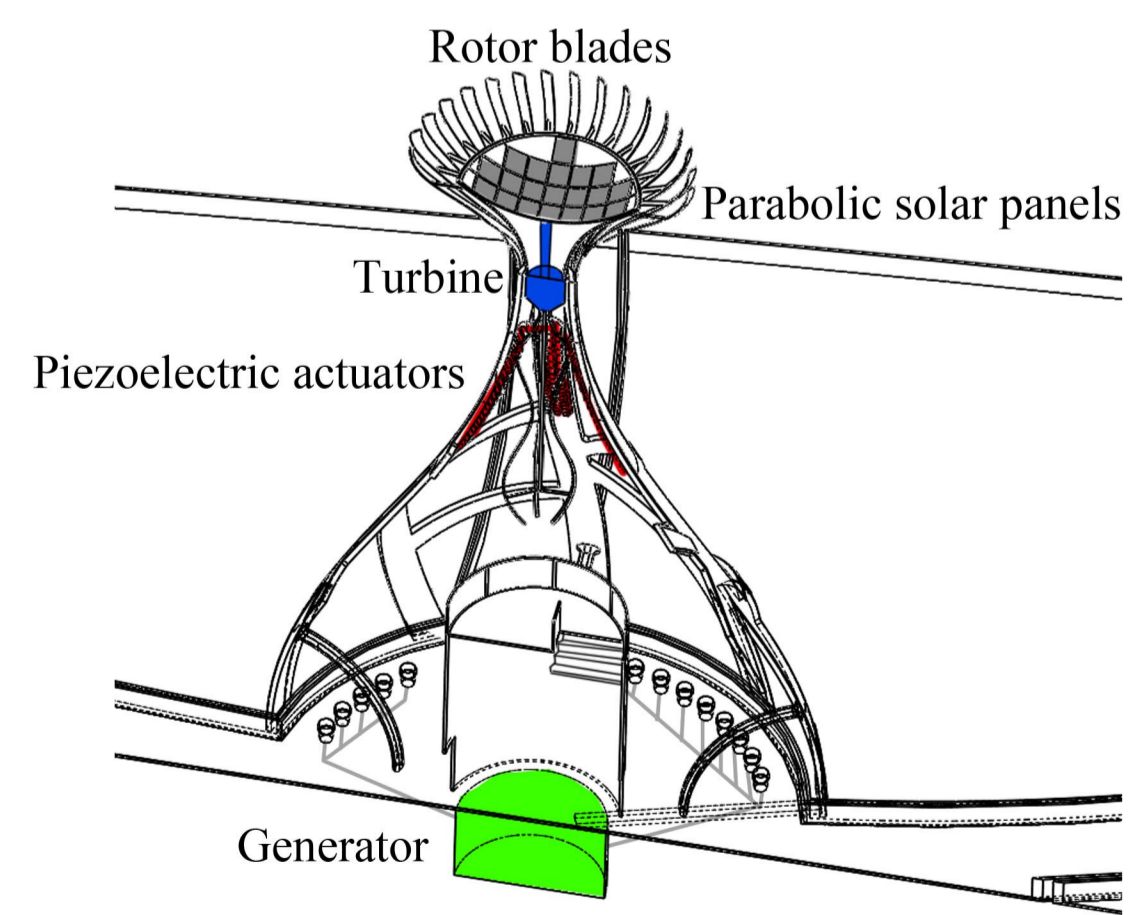

Parabolic solar panels

Piezoelectric actuators

LED lights

Rotating LED lights are a strong sign at night

Visitors can also generate electricity by sitting down

Exhibition panels

The idea of the design is also to let the city be natural despite modern technologies and to integrate regional plants into the city. Low-emission technology is important for nature, but nature is also important for people, especially in cities. The visitors of the area can stroll through the fascinating mangrove trees, rest under the shady installations or inform themselves about the carbon emission topic and exciting sustainable technologies. Four viewing platforms also offer interesting views over the mangrove fields and the surrounding architecture.
