

Dyadic Sphere

Outcome

In the near future [1 to 2 years] Masdar City population will walk their everyday paths and outside activities under the refreshing and intermittent shades of HCPV panels and climbing plants attached to slim structures that lay in the site, in company off xero-ophile species, running water through the irrigation ditch in any direction, all integrated within a strict geometry of a mashrabiya composed by different layers.

The water obtained through the proposed cycles will modify the desert conditions of the site, the intervention behaves like an evolving organism and the hostile environment now becomes friendly and sustainable ecosystem.
