

DUNE

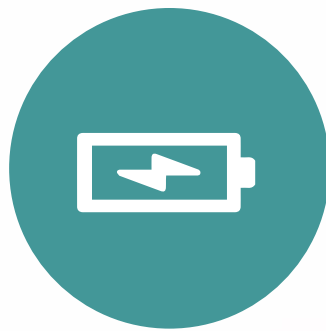

The technology chosen has been shown is currently available for large scale deployment. The technology incorporates sun tracker technology at the two wings of DUNE’s parabola that follow the sun’s rays throughout the day. This undulating pattern reflects the project’s focus on “the source” being the sun and the moving nature of DUNE a testament to the organic shifts of nature. DUNE aims to inspire change with movement and focus on solar energy.

Solar Energy
3MW DC

Annual
Production

Energy Storage
1MW

The energy storage facility glows at night when it has extra capacity
