

MANGROVES LIGHT

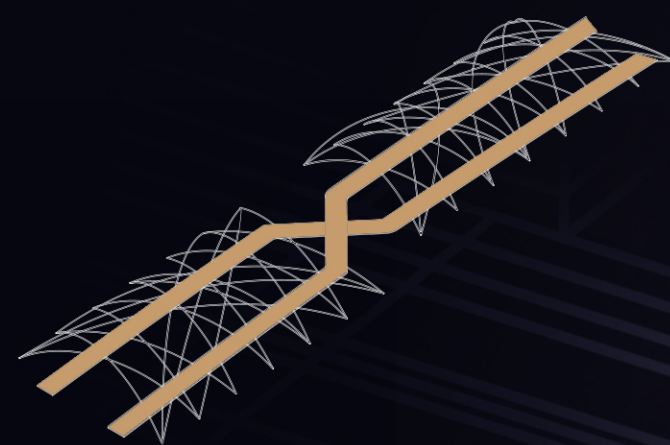

We brought some room for entertainment and producing renewable energy by combining the forms of the roots of Mangrove and creating some plane between the lines of the roots. Regarding producing renewable energy, we put microturbine between some space of roots and flexible solar panels in some other free space, exactly like the function of Mangrove that separate water and salt in according to its demands.

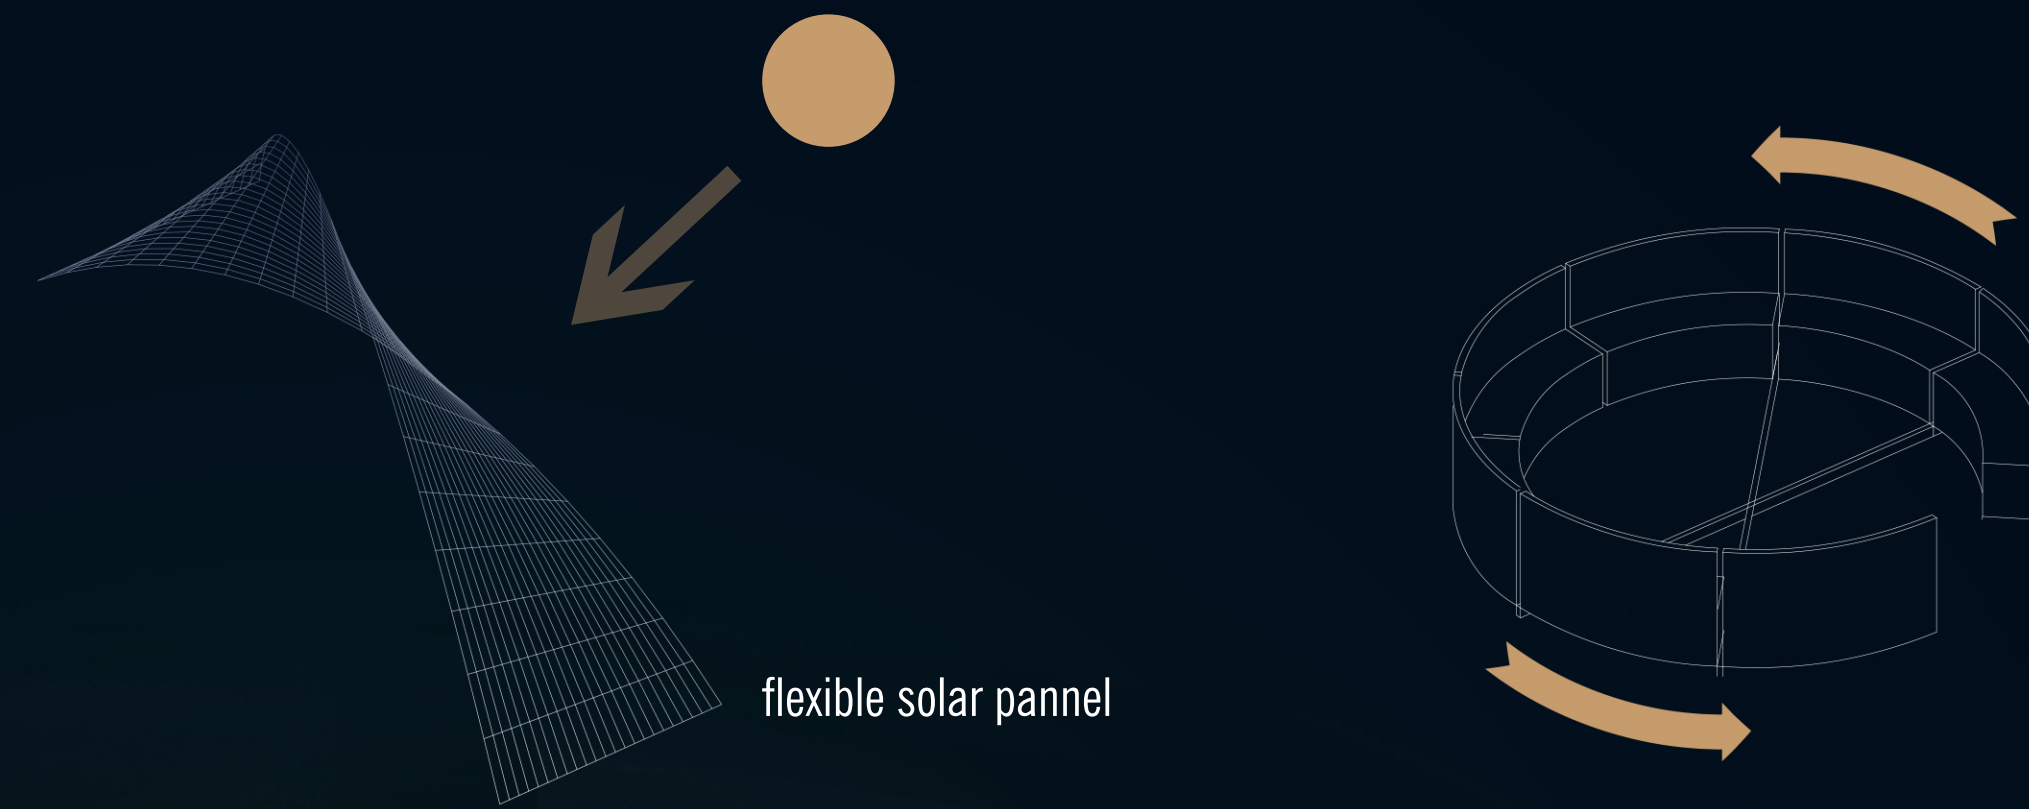

Mangroves

Pipe pannel

Combining bicycle the path and pipes

flexible solar pannel
