

MASDAR TREES or Rain Forset

CONCEPT

Masdar means the source. And what if we use sources that are found in the nature to reduces a nother source at zero cost ? In my concept I am using the enegry from the Sun to extract clean Water from thin Air. This invention is already being used, but what if we can turn it in to tree like sculptures that can provide free drinking water, humidify the area and give a shade for the visitors at no cost? The running water could quickly give rise to grass and sustain plants around, their by creating an Oasis.. “ And we made from the water everything alive..”*
