

*"Beautiful, damn hard,
increasingly useful.
That's fractals."*

*- Benoit Mandelbrot,
mathematician who first used the
term "fractal" in 1975*

THE MASDAR FRACTALS

The Masdar Fractals comprises of two large scale structures that function as photo voltaic electricity collectors. These unique looking forms one triangular the other cubic are based on Sierpiński-Menger fractal models. The project entails a unique pairing of visual complexity and physical functionality, pushing the envelope of Artwork that is able to collect electricity with a realistic approach and striking aesthetics.
