

**SUPER BLOOM**  
is a field of photovoltaic panels. The sun is an incredible energy resource and in the sprawling site in Master City we are forming that source and distributing it to the city with each flower.

Each flower is composed of 3 flower petals. **SUPER BLOOM** consists of 214 flowers, for a total of 6,630 m<sup>2</sup> of surface area for photovoltaic panels.

There are 4 solar panels per petal for a total of 12 solar panels on each flower, for a total of 2,568 solar panels.

These petals open during the day to capture the energy of the sun, then slowly begin to close as the sun sets to protect itself from the environmental conditions during the night while the energy it has captured goes to the network located beneath **SUPER BLOOM**, and can be used from the existing grid.
