

## Sky Dome

panoramic view of the city

## Spinning Skin

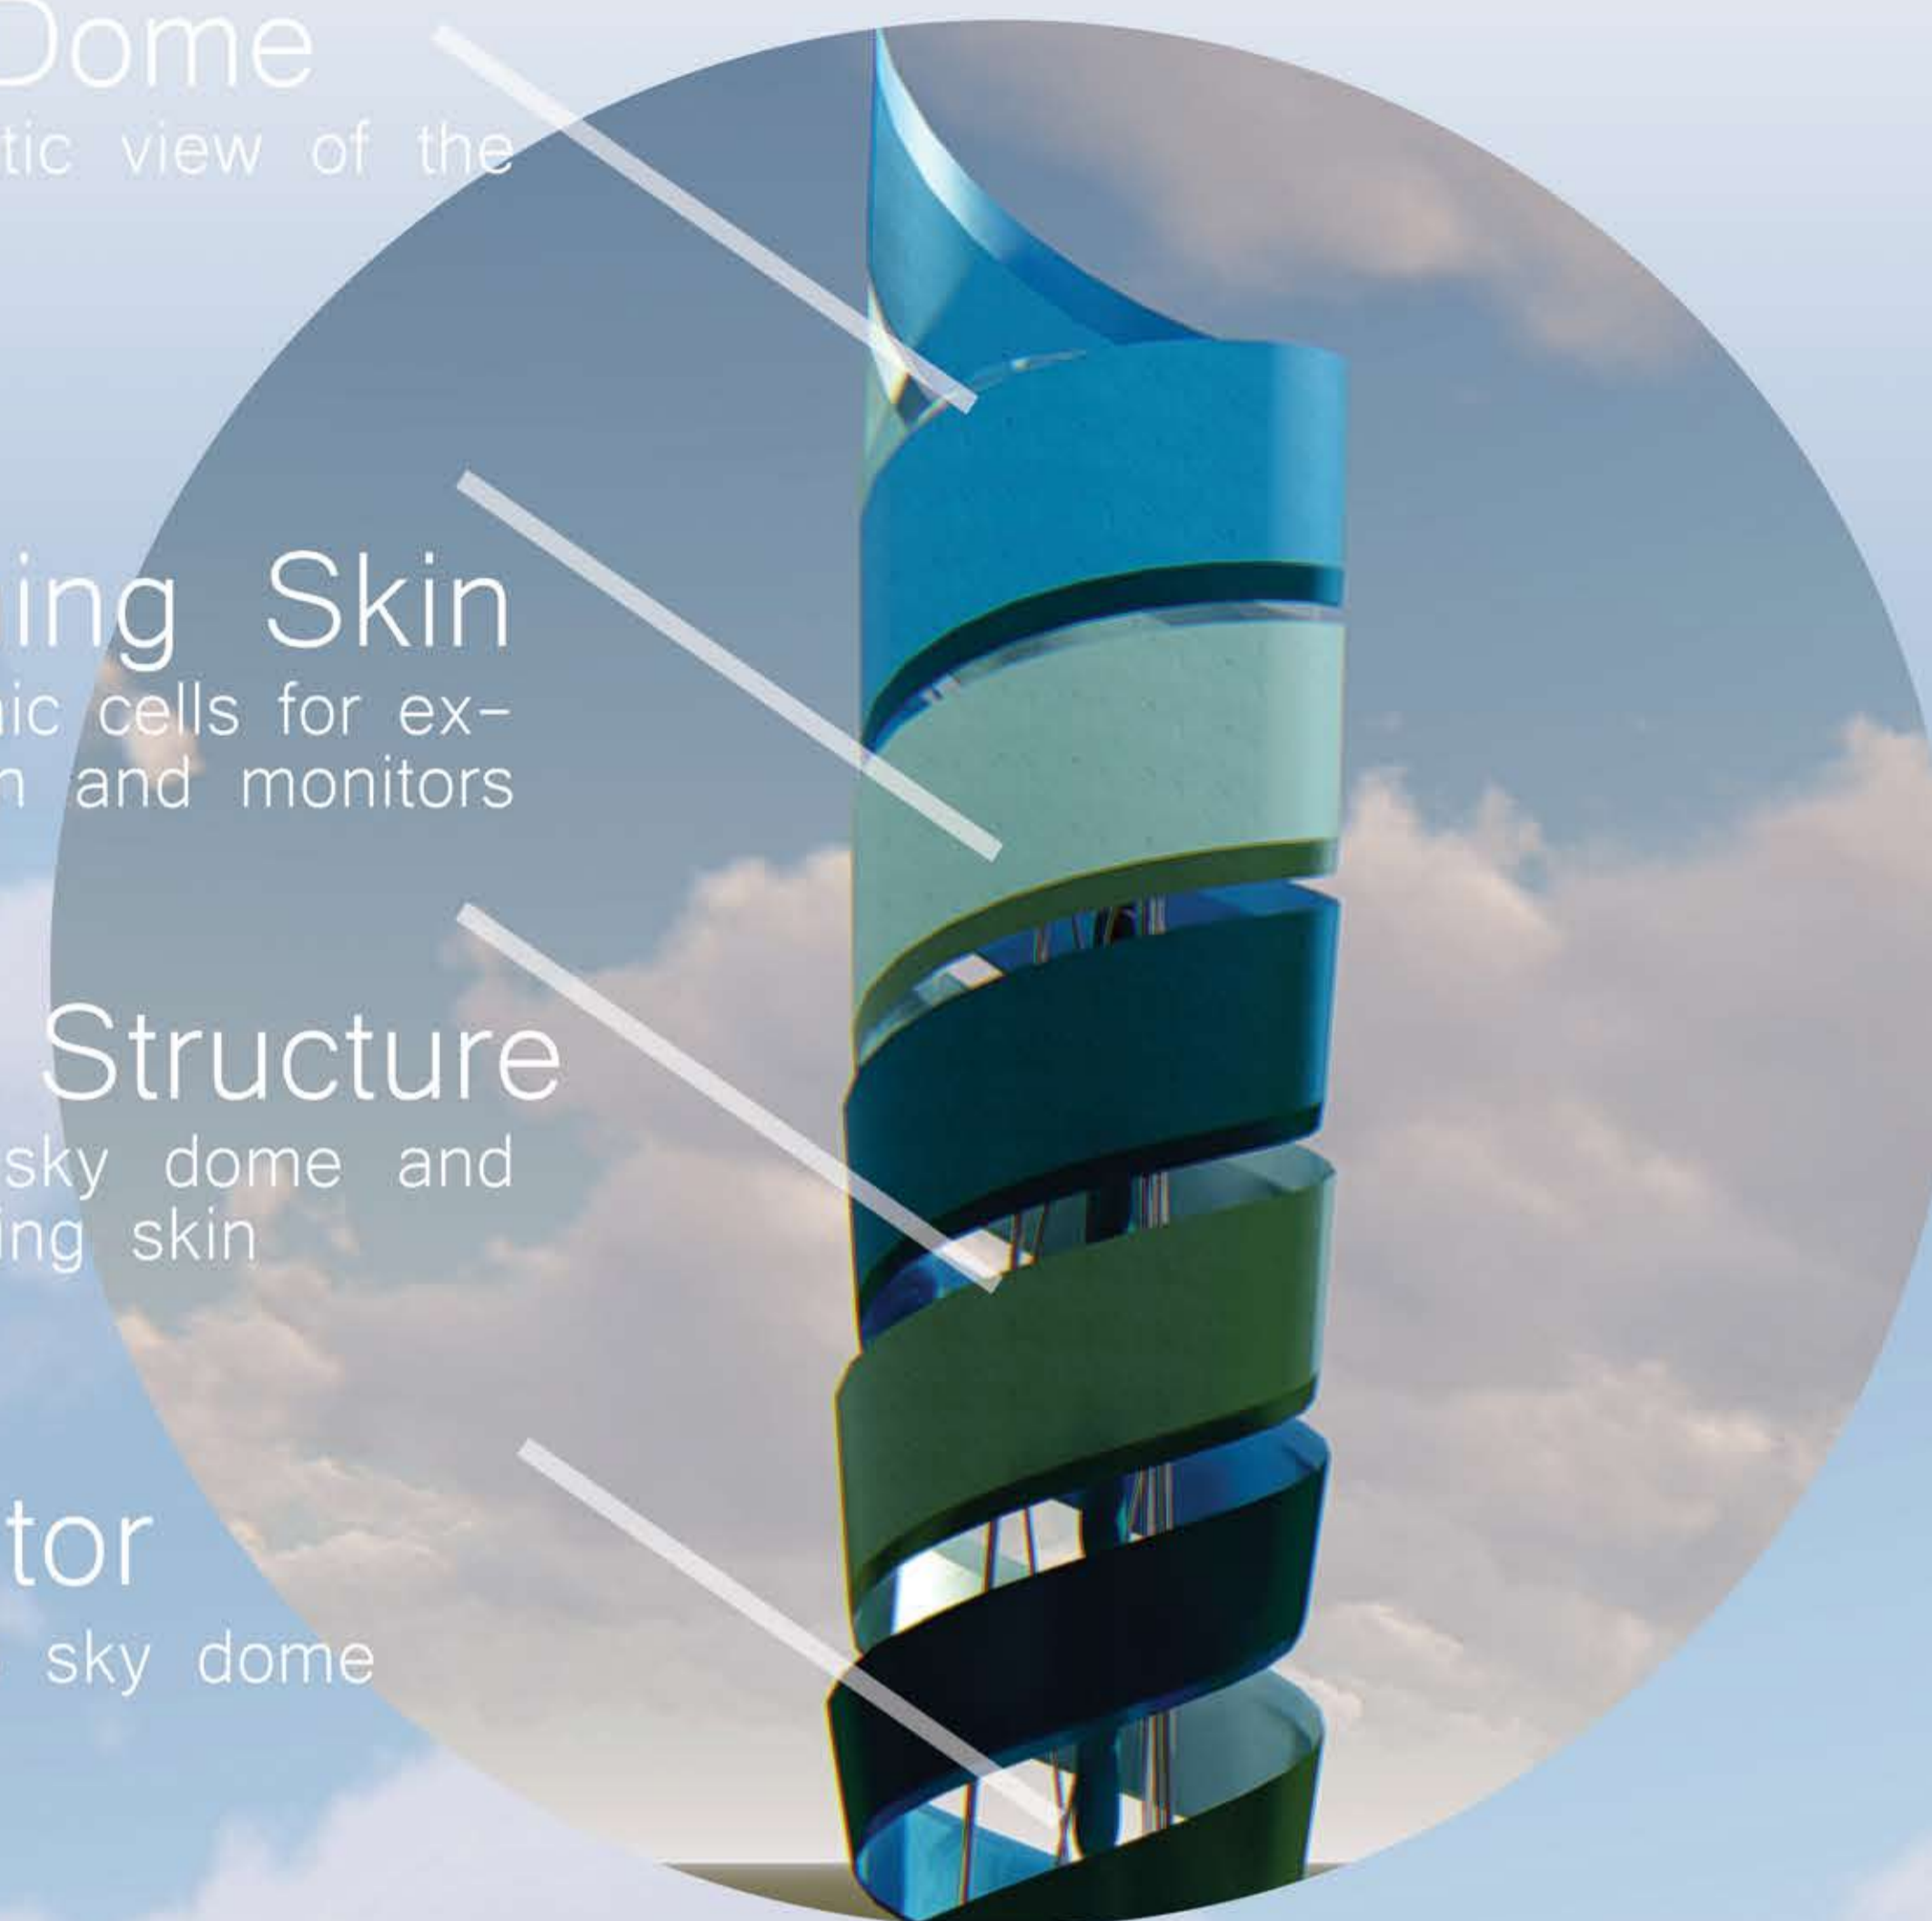

photovoltaic cells for external skin and monitors inside

## Main Structure

for both sky dome and the spinning skin

## Elevator

to access sky dome

The proposed structure will not have a negative impact on the surrounding environment.

Sustainable fiberglass used for the wind panels has a low embodied energy, is safe to handle and dispose of and will be shredded and used as packing / filler material when it has reached the end of its long life.

The negative environmental impact of concrete will be reduced by selecting contractors that guarantee the use of conserving materials and energy for the concrete-making and improvement of the durability of the concrete products.
