

- Read: We inspired from sunflowers and used it in our technology as bio mimic, Using the intelligence of plants to analyze sun direction. The solar panels are sensitive to radiation of sunlight and can rotate in three main axis and as a result, they can be exposed to the highest sunlight. Moreover, the ring has got a sensor and can read human motions.
- Store: Like Amber the energy will be save in both main form and land. The energy which released by human motions will be save as electricity and can change to mechanical energy or store in Amber capsules which are distributed in land.
- Write: We use saved energy for different purposes. The energy which saved by solar panels can rotate the outside part of the ring. Also, the energy which saved by human motions can rotate the inside part of the ring. The saved energy can illuminate the capsules in land during the night and consequently, these energy capsules can be used independently in other locations for variety purposes.

Solar Panels Stores Energy in Amber Capsules
