

Desert Flower inspired by nature solar panel factory.

Like flowers it consume sun light and produce energy to give clean energy. Factory has two stages a day and night. At day sculpture receive the energy to give it back at night. Factory is a negative to flower, it shows it beauty at night.

Construction is based on steel frame in between contains flexible solar panels in U shape. Shape in few variations, lets to space on less area panels more efficiently. Altho the space efficiency U shape lets to

bounce the solar light to another receiver, so in theory it can grab energy from different angles. At night produced energy is given to the system and to lighten the sculpture. Mirrored foil at bottom of the sculpture, when is lighten reflection multiplied lights so the sculpture is like a magic mirage.

An infinite mirror shows more depth on flat surface. The surface shape establishes to desert tents so it has interesting shape and hides the spectators from huge sun exposition also it gives shadow and micro climate.

Illusion architecture can produce new quality in modern urban spaces.
