WALKING FUTURE

My project (Walking Future) attempts to embody Abu Dhabi's history, culture and image. At the same time, it emphasises the awareness of Green Electricity. Therefore, the project will have three sources of alternative electricity production.

This solitary spaces can be used All connecting roads Desert like environment (celebrating it) as gathering places and praying shall collect friction areas if needed Embeded Floor lighting electricity and thermal. The Walking spaces collect friction and This is an enclosed opened plan space to be thermal electricity

used as needed. The intention is to have expos and galleries happening on the spaces indoor Water body system celebrating another beautiful façade of Abu and out door. New technologies and Ideas can be presented and tested on the spot

we will extract solar energy (solar panels), thermal energy (from hot air and from the ground), and the third electricity supply will be frictional energy (friction from the roads, sidewalks and walking paths in the park).
