

VERTICAL HABITAT

THE SYMBOL OF MASDAR CITY

Regarding the issue of reducing carbon in the city of Masdar, we designed a vertical habitat in two floors to create a small habitat for animals, especially birds and aquatic animals, along with reducing the area's carbon footprint. The void design on the second floor of this habitat will also help lower the temperature and humidity of the lower floor, in addition to providing natural light. This green space includes environments for exercise, sunbathing, and interaction and dialogue between people.
