Solar Glass Panel with 15 Neutral Colors in 70% Transparency

Solar Glass Panel projecting shadows with a variety of colors on objects and people underneath and on the ground surfaces to create **Dynamic Spaces** overtime

Color Palette of the Solar Glass Panel

The ClearView™ Power glass coating comes with a variety of color tint possibilities, including neutral color with transparencies between 50-80%.

Given the technology, the solar glass panels are coated with 15 neutral colors in 70% transparency, which generates over 437×10^{15} different colors in the shadow. The variety of colors created from the solar glass panel provide a dynamic experience for residents and travelers day and night due to the constant movement of the Sun. The combination of colors and shadows offers thousands of millions of dynamic visual configurations for people to engage across the entire place.
