

The Rising Horizon

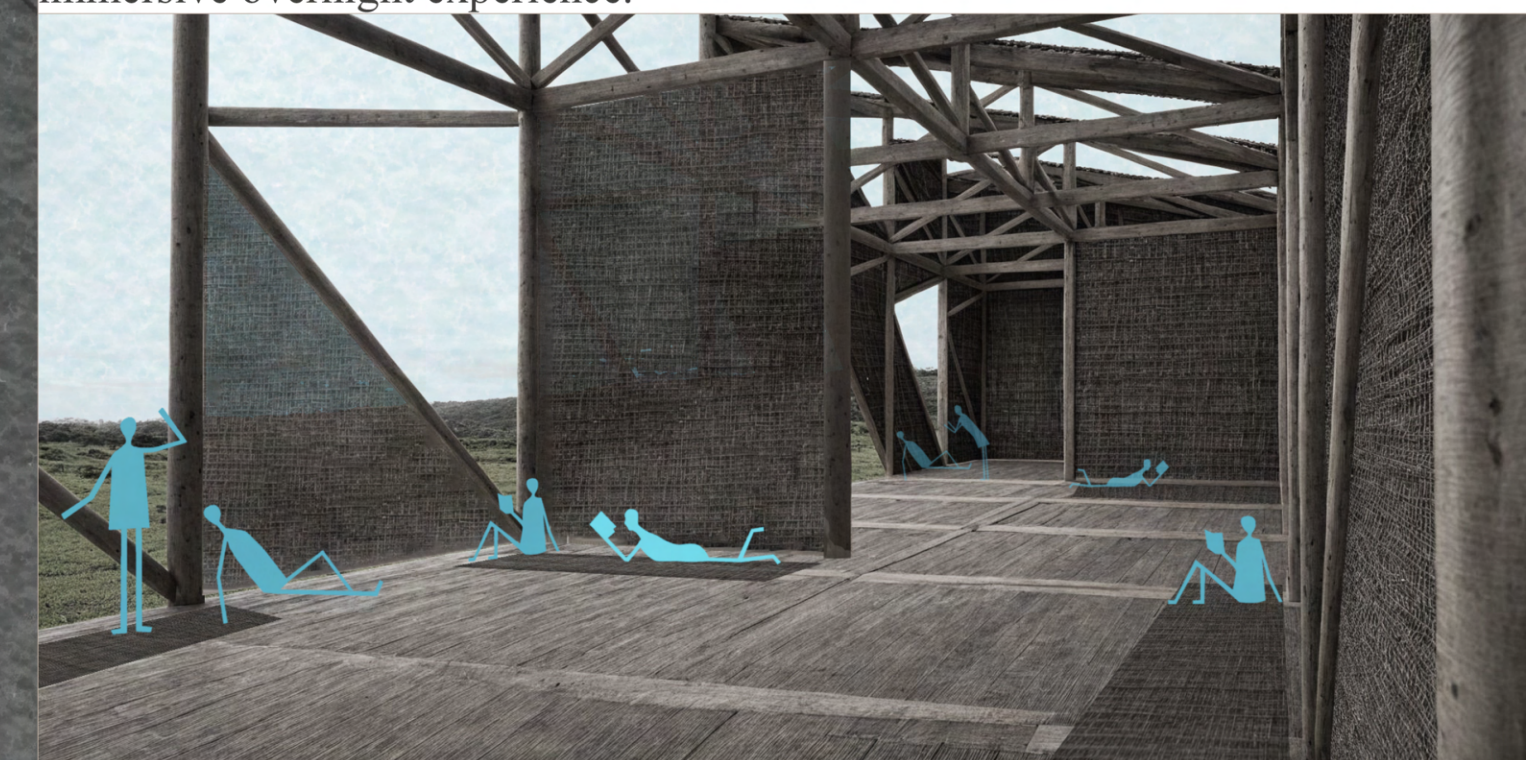

Community Function:

The building is designed to serve as an open and accessible space for community gatherings and meetings. It is equipped with seating at two different heights to accommodate various user needs, enhancing comfort and inclusivity. The space is well-suited for celebrations, informal social interactions, and communal events.

Tourist Accommodation:

The building provides shelter from both sun and rain and includes basic sanitary facilities, making it suitable for use as a simple accommodation option. Its elevated position and scenic views may also appeal to tourists seeking a unique and immersive overnight experience.

Tourism or Community Function:

The building is well-suited for hosting workshops, local markets, or other community events. The elevated bench can function as a table or counter, providing practical support for a variety of activities. Through farmers' markets and cultural workshops, tourists are offered an opportunity to engage with and gain insight into local traditions, all while enjoying the surrounding scenic views.

Access to Water and Electricity:

At both ends of the building, enclosed utility blocks provide access to electricity and water, including basic sanitary facilities. Electrical power is supplied by rooftop solar panels, with surplus energy distributed to the village through an underground network. Rainwater collected from the roof is filtered and stored, with both the filtration system and water storage tank housed within the utility block.
