# **Build Collection**

Provide Resources

### Generate Community

## **Prototype Considerations**

Celebrate Culture

#### Gather Solutions

The components of this system can easily all be present at small scale. A small Bure structure functions as a walk-in public space where local art is exhibited, perpaps on a rotating schedule. The installation is outside of a museum, a school, or a tourist destination. Power and water technology is prototyped in collaboration with local enthusiasts, as collected by a public call to action. The obective of the prototype is to educate people about tradiitonal culture and building practices, and also modern environmental challenges. Ideally, by performing the project, we generate better and better soluitons to those enivronmental challenges.

## The strategies discovered by building Collection can be exported throughout Naviti Island and beyond.
