

# LAGI 2025 FIJI

## Palm heart

Palm heart - is our eco-friendly project developed specifically for the village of Marou. Inspired by the aesthetics and culture of local settlements, influenced by the local atmosphere and traditions, we created our installation. Intensive work on the project spanned several months—all to ultimately present a worthy outcome as a potential final installation variant for the Fiji islands. The overall complex installation consists of simple modules that assemble into one unified structure.

The concept for the shape of our object is inspired by the image of a Fijian coconut palm. The silhouette of one module represents a sort of "flower" on a vertical stem, thereby evoking the outline of a coconut palm.

The entire installation occupies an area of 273 m<sup>2</sup>, which amounts to 1.8% of the allocated construction site. It is worth mentioning that the building structure allows its area to be easily expanded to any desired size and scale, as well as replicated on other islands and plots.
