

Loma Shade

AN ETHEREAL VANGUARD OF GREEN ENERGY

What is the Loma Shade?

It's simple. The Loma Shade is an elegant solution to obtain clean energy and rainwater on the island of Naviti.

The Loma Shade installation channels the elegance of the manta ray and the vibrance of the hibiscus two iconic symbols of Fijian land and sea. This expressive structure embodies the congruence of the island, translating biodiversity into form and energy.

Far beyond utility, *Lagi 2025* is a sculptural solar canopy. Photovoltaic wings and petals gather sunlight and rain, offering renewable power and harvested water, an intersection of beauty, sustainability, and function.
