

# Loma Shade

The *Lagi 2025* installation will serve as a catalyst for sustainable development, cultural expression, and community empowerment in Marou Village. By delivering renewable energy and rainwater harvesting, it directly supports essential services such as lighting, refrigeration, water access while surpassing carbon-heavy alternatives. Yet, its impact reaches far beyond infrastructure.

As a public space, the Luma Shade fosters community gathering, intergenerational exchange, and cultural education. “Under its wings” tourist and locals can learn about local tradition and see how old dynasty can combine with new technology. It strengthens the local community not only by offering clean energy and water, but by building local skills and pride. In every sense, *Lagi 2025* is designed to uplift the community it inhabits strengthening its collective identity.

The success of the Loma Shade depends entirely on the community it serves. This installation is not a top-down intervention, but a co-created expression of place, tradition, and purpose
