

This collaborative effort stems from sustainability and community involvement tapped from the skills of the local residents. It will be made with natural materials available in the area like bricks, incorporating traditional crafts like pottery and knitting. The architecture includes several interdependent components that are designed to be integrated into one system which is self-contained, holistic ,or cost-effective. More than serving its function, the initiative is meant to support the understory community and fauna, helping to promote the balance between nature and human habitation. In doing so reverence the native wildlife and local community while appreciating the culture and nature.

EXPLODED DIAGRAM

From this shore to every island—together, we protect indigenous communities.
