AERA3 ----- Modular Tourist Rest Zone, Eco Dining & Leisure Hub

**A modular eco-dining zone designed for tourist leisure, combining renewable energy, shaded comfort, and economic vitality.**

Surrounding the central energy tower, inspired by a spiral shell-shaped sunshade canopy, the modular and detachable dining and leisure zone is built with eco-friendly materials sourced locally from Fiji.

This area includes seating for visitors, a small recreational zone for children, and scenic spots for tourism and relaxation.

It not only promotes sustainable ecological design, but also contributes to the local economy by attracting tourism and providing community amenities.

The generated solar energy is delivered via integrated electrical wiring
