

Eco EnergyScape

Fiji's vulnerability to climate change highlights its strength: the enduring resilience of its coastal communities. Building on this spirit, our proposal addresses shared consequences of diverse challenges through four guiding principles—Rejuvenate, Coexist, Adapt, and Grow. These principles shape hybrid design strategies rooted in Nature-Based Solutions (NBS), promoting ecological balance, layered protection, and empowered, adaptive living in harmony with nature.

Solar Energy

260 MWh

Rainwater Harvesting

**5,660,390 L
annual**

Fog Catcher

**6,000 liters
daily**

**Biogas & Electricity
generating pave**
