

# JUST A ROOF

„A Simple Act for a Vital Need“  
This project is rooted in a fundamental yet powerful goal: to meet a basic energy need by installing 400 m² of solar panels. Our approach is not driven by complexity but by clarity and impact. The design centers on a single, purposeful gesture—a homogenous pitched roof—optimized to harness solar energy efficiently while becoming a spatial and social asset to the community. By elevating this roof, we transform a technical necessity into a civic opportunity: a shaded, open space that invites gathering, rest, and use by the local population in any way they choose.
