

RAIN

Captures and utilizes rainwater, integrating an eco-friendly water management system into the design.

SOLAR

Harnesses solar energy through the large panels, providing sustainable power to support the system's functions.

WIND

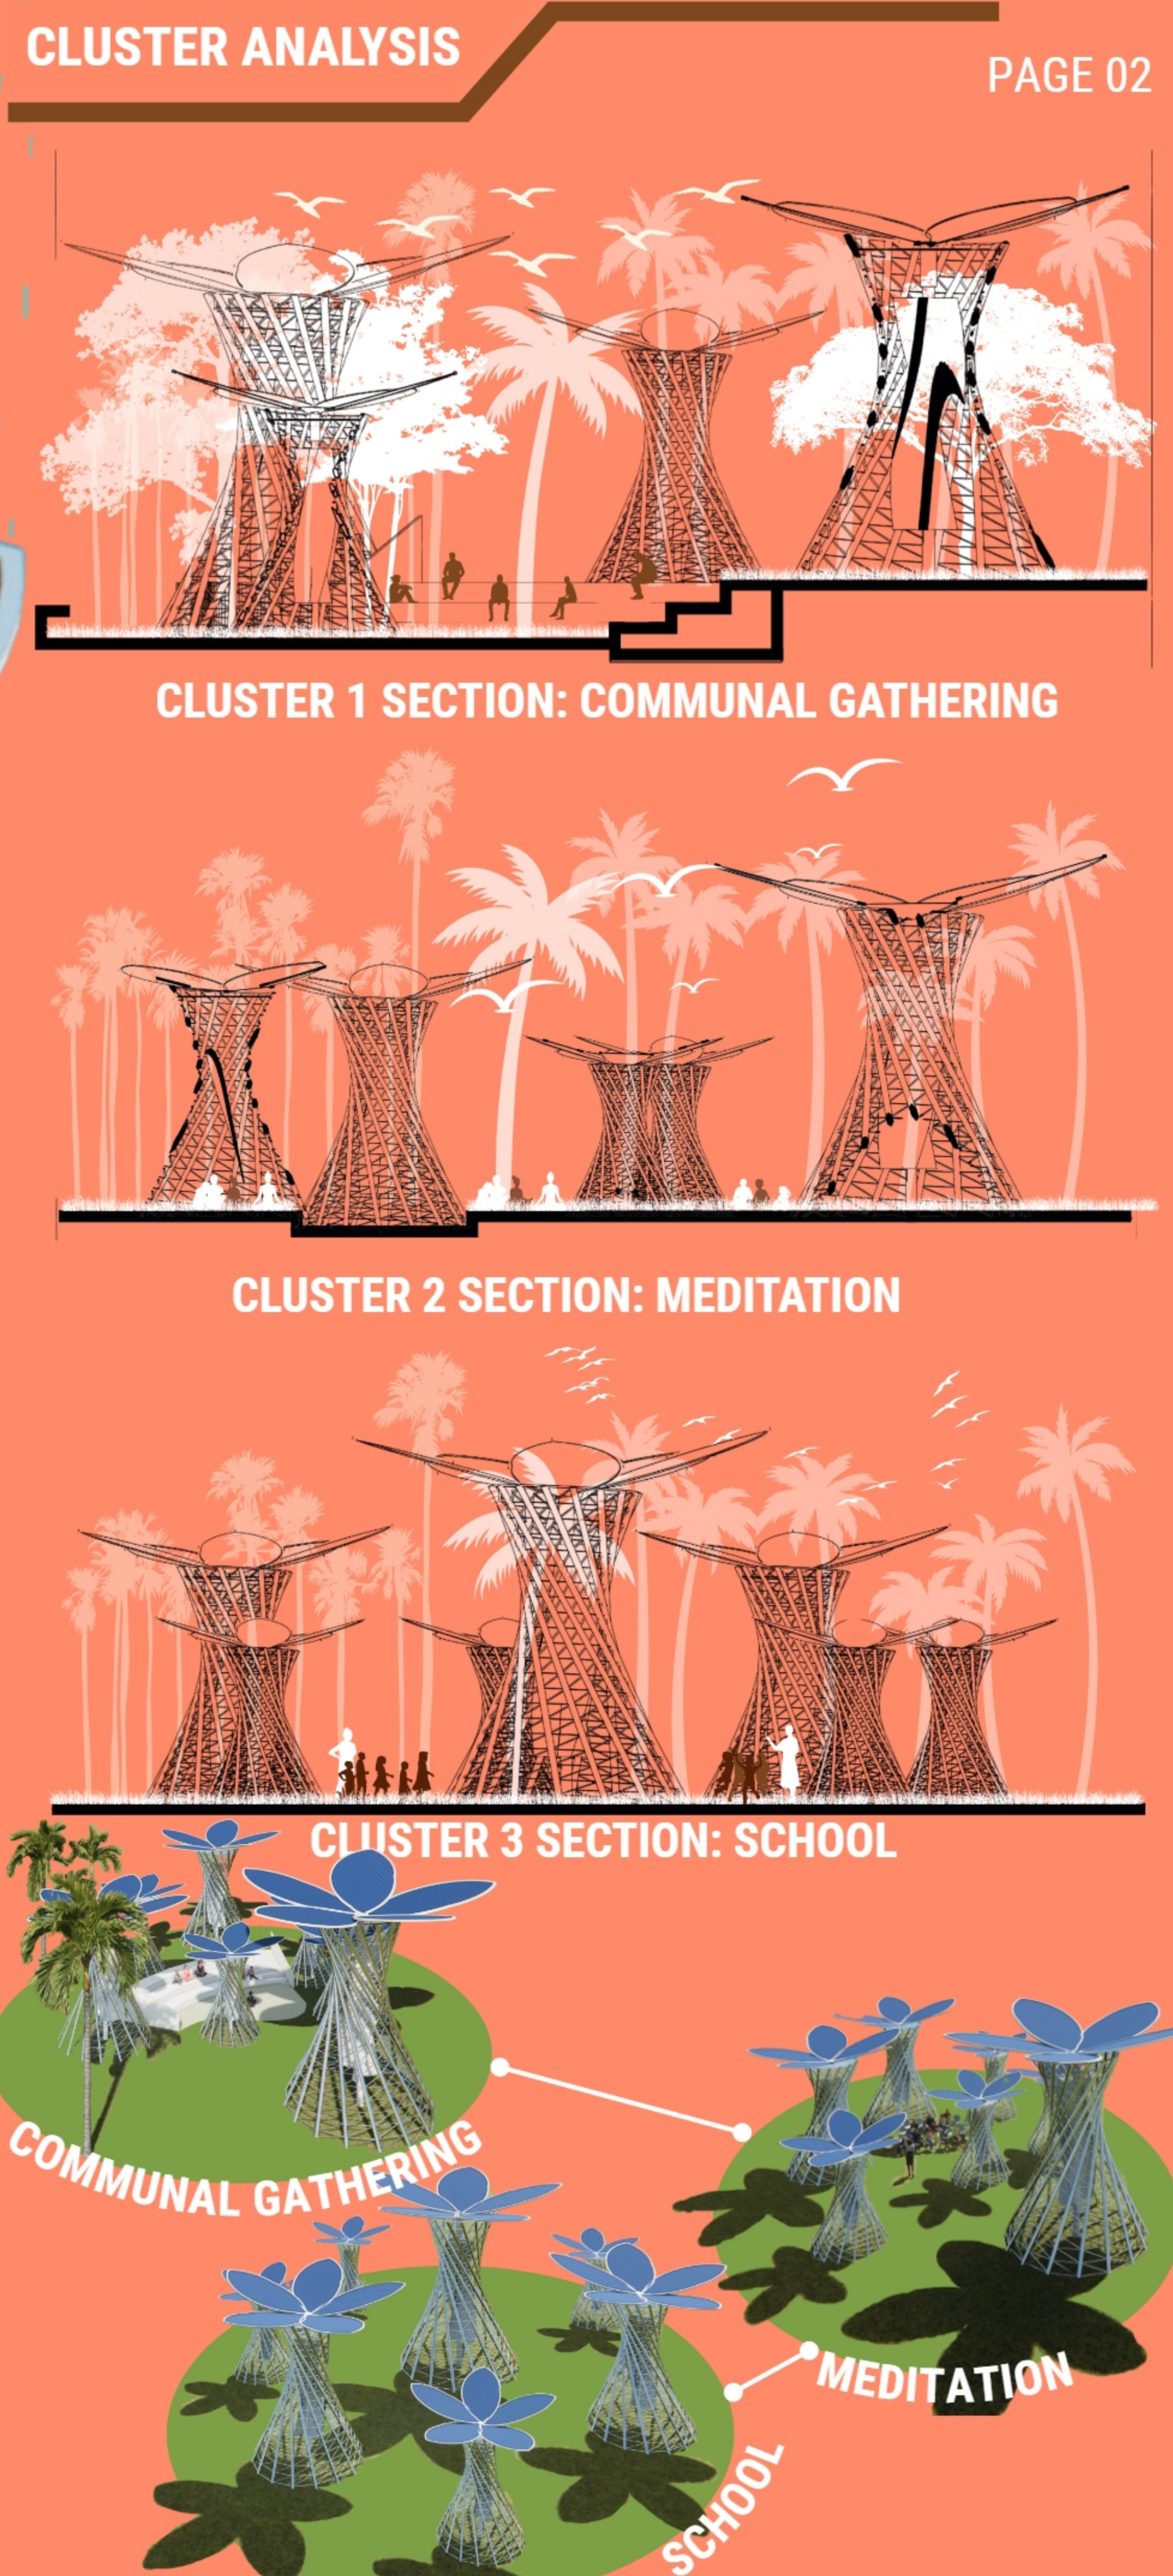

Uses wind energy to generate additional power, optimizing energy collection and efficiency.

BATTERY

Stores energy generated from solar and wind, ensuring continuous operation even when conditions are not ideal.

WATER RESERVOIR

Collects and stores water, ensuring water availability for various needs in a sustainable and efficient manner.
