

Flower of plenty

The FOP is a fully ecologically add locally sourced and constructed design that uses no harmful or potentially dangerous materials and is weather and catastrophe proof. It is named flower of plenty as its design resembles the hibiscus flower, the flower that feeds and empowers the animals and humans on the Fiji islands. The FOP had a round outlook surrounded with rows of folding solar panels on rollout ropes, hanging above cascades of petal shaped tubs. The tubs can be filled with soil or water depending on needs, but a combination could make aquaculturing an easy reality. Depending on plant needs the solar panels are grouped in alternated groups to control shade time schedule of plants and or fish.
