

This space serves as a market hall, social venue, and community garden.

Vertical gardens line the structure, irrigated by collected rainwater, offering food security and natural cooling.

After carefully examining the soil suitability for each plant, we have found these planters to be most necessary.

We suggest for the space separating walls to be vertical gardens too if possible, this way we can reduce temperature fluctuations and dampen noise.

# SolarNest

Examples for space separating wall planters that we are implementing.

Conversation pits and smaller zones encourage gathering and social connection.
