

BEAUTY AND COMMUNITY SPACE: A GATHERING PLACE FOR ALL

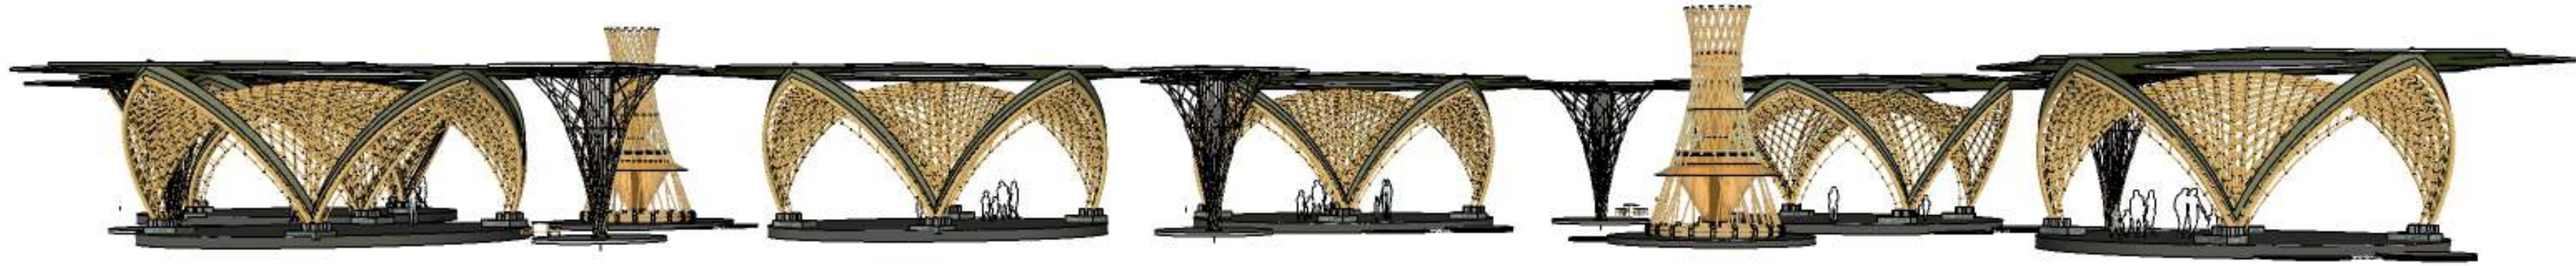

Shaped like flowers, the bamboo structures offer a unique, inviting space for the community. The shaded foundations provide seating for gatherings, events, and daily relaxation, surrounded by the beauty of woven roofs and greenery. This is more than infrastruttura it's a landmark where Marou can celebrate culture, share stories, and build stronger connections.

LANDSCAPING FOR FLOOD PROTECTION AND FUTURE BUILDING: NATURE - BASED SOLUTIONS FOR RESILIENCE

Strategically placed swales and berms on the northeast and east sides protect against flooding, recharge groundwater, and create fertile ground for new bamboo growth. This living landscape forms a natural windbreak, shields the structures, and provides a renewable source of building material. Every four years, mature bamboo can be harvested for new projects, supporting a cycle of sustainability and self-reliance.

EASILY EXPANDABLE AND REPLICATE: GROWING WITH THE COMMUNITY.

As Marou's needs grow, our design grows too. New bamboo flower structures can easily be added, and additional Atmospheric Water towers and tanks can expand capacity. The modular approach allows the project to adapt and scale, ensuring long-term sustainability and flexibility for future generations.

CONCEPT OF DESIGN
