

COLLECTION

PROCESSING

OUTPUT

The primary materials of each sector are prepared, cultivated and collected. In the Earth Sector example, a native-focused permaculture garden produces edibles, native seed for landscape restoration, and renewable building materials

Spaces for the regeneration of materials. For the Earth Sector, a makerspace building hosting workspaces and equipment facilitates treatment of seeds and preparation of natural materials into art and functional objects, from traditional basket weaving to laser engraving.

Multi-functional, day-use spaces and inhabitable overnight shelters built using the primary material of each sector. Additional outputs such as native plant restoration from the Earth Sector and sculpture are scattered across the Fly Ranch property as appropriate.
