

STONE MOTHER

The parabolic trough and storage of electrical energy for charging drones

The path of water transfer from the water storage tank to the drones

An idea for the future :
Jetpack engine
Flight by energy

● Form concept of drones

Project outlook is not long termed.
In this project a central tower is needed which the drones are installed on.
Purpose of this central tower is not only to create energy but to conserve energy which leads to recharging of drones and fulfillment of water depots in the same place.
In this tower is used highly polished parabolic reflecting surfaces that focus sunlight onto a highly-efficient Stirling engine.
