

# SALT CIRCUIT

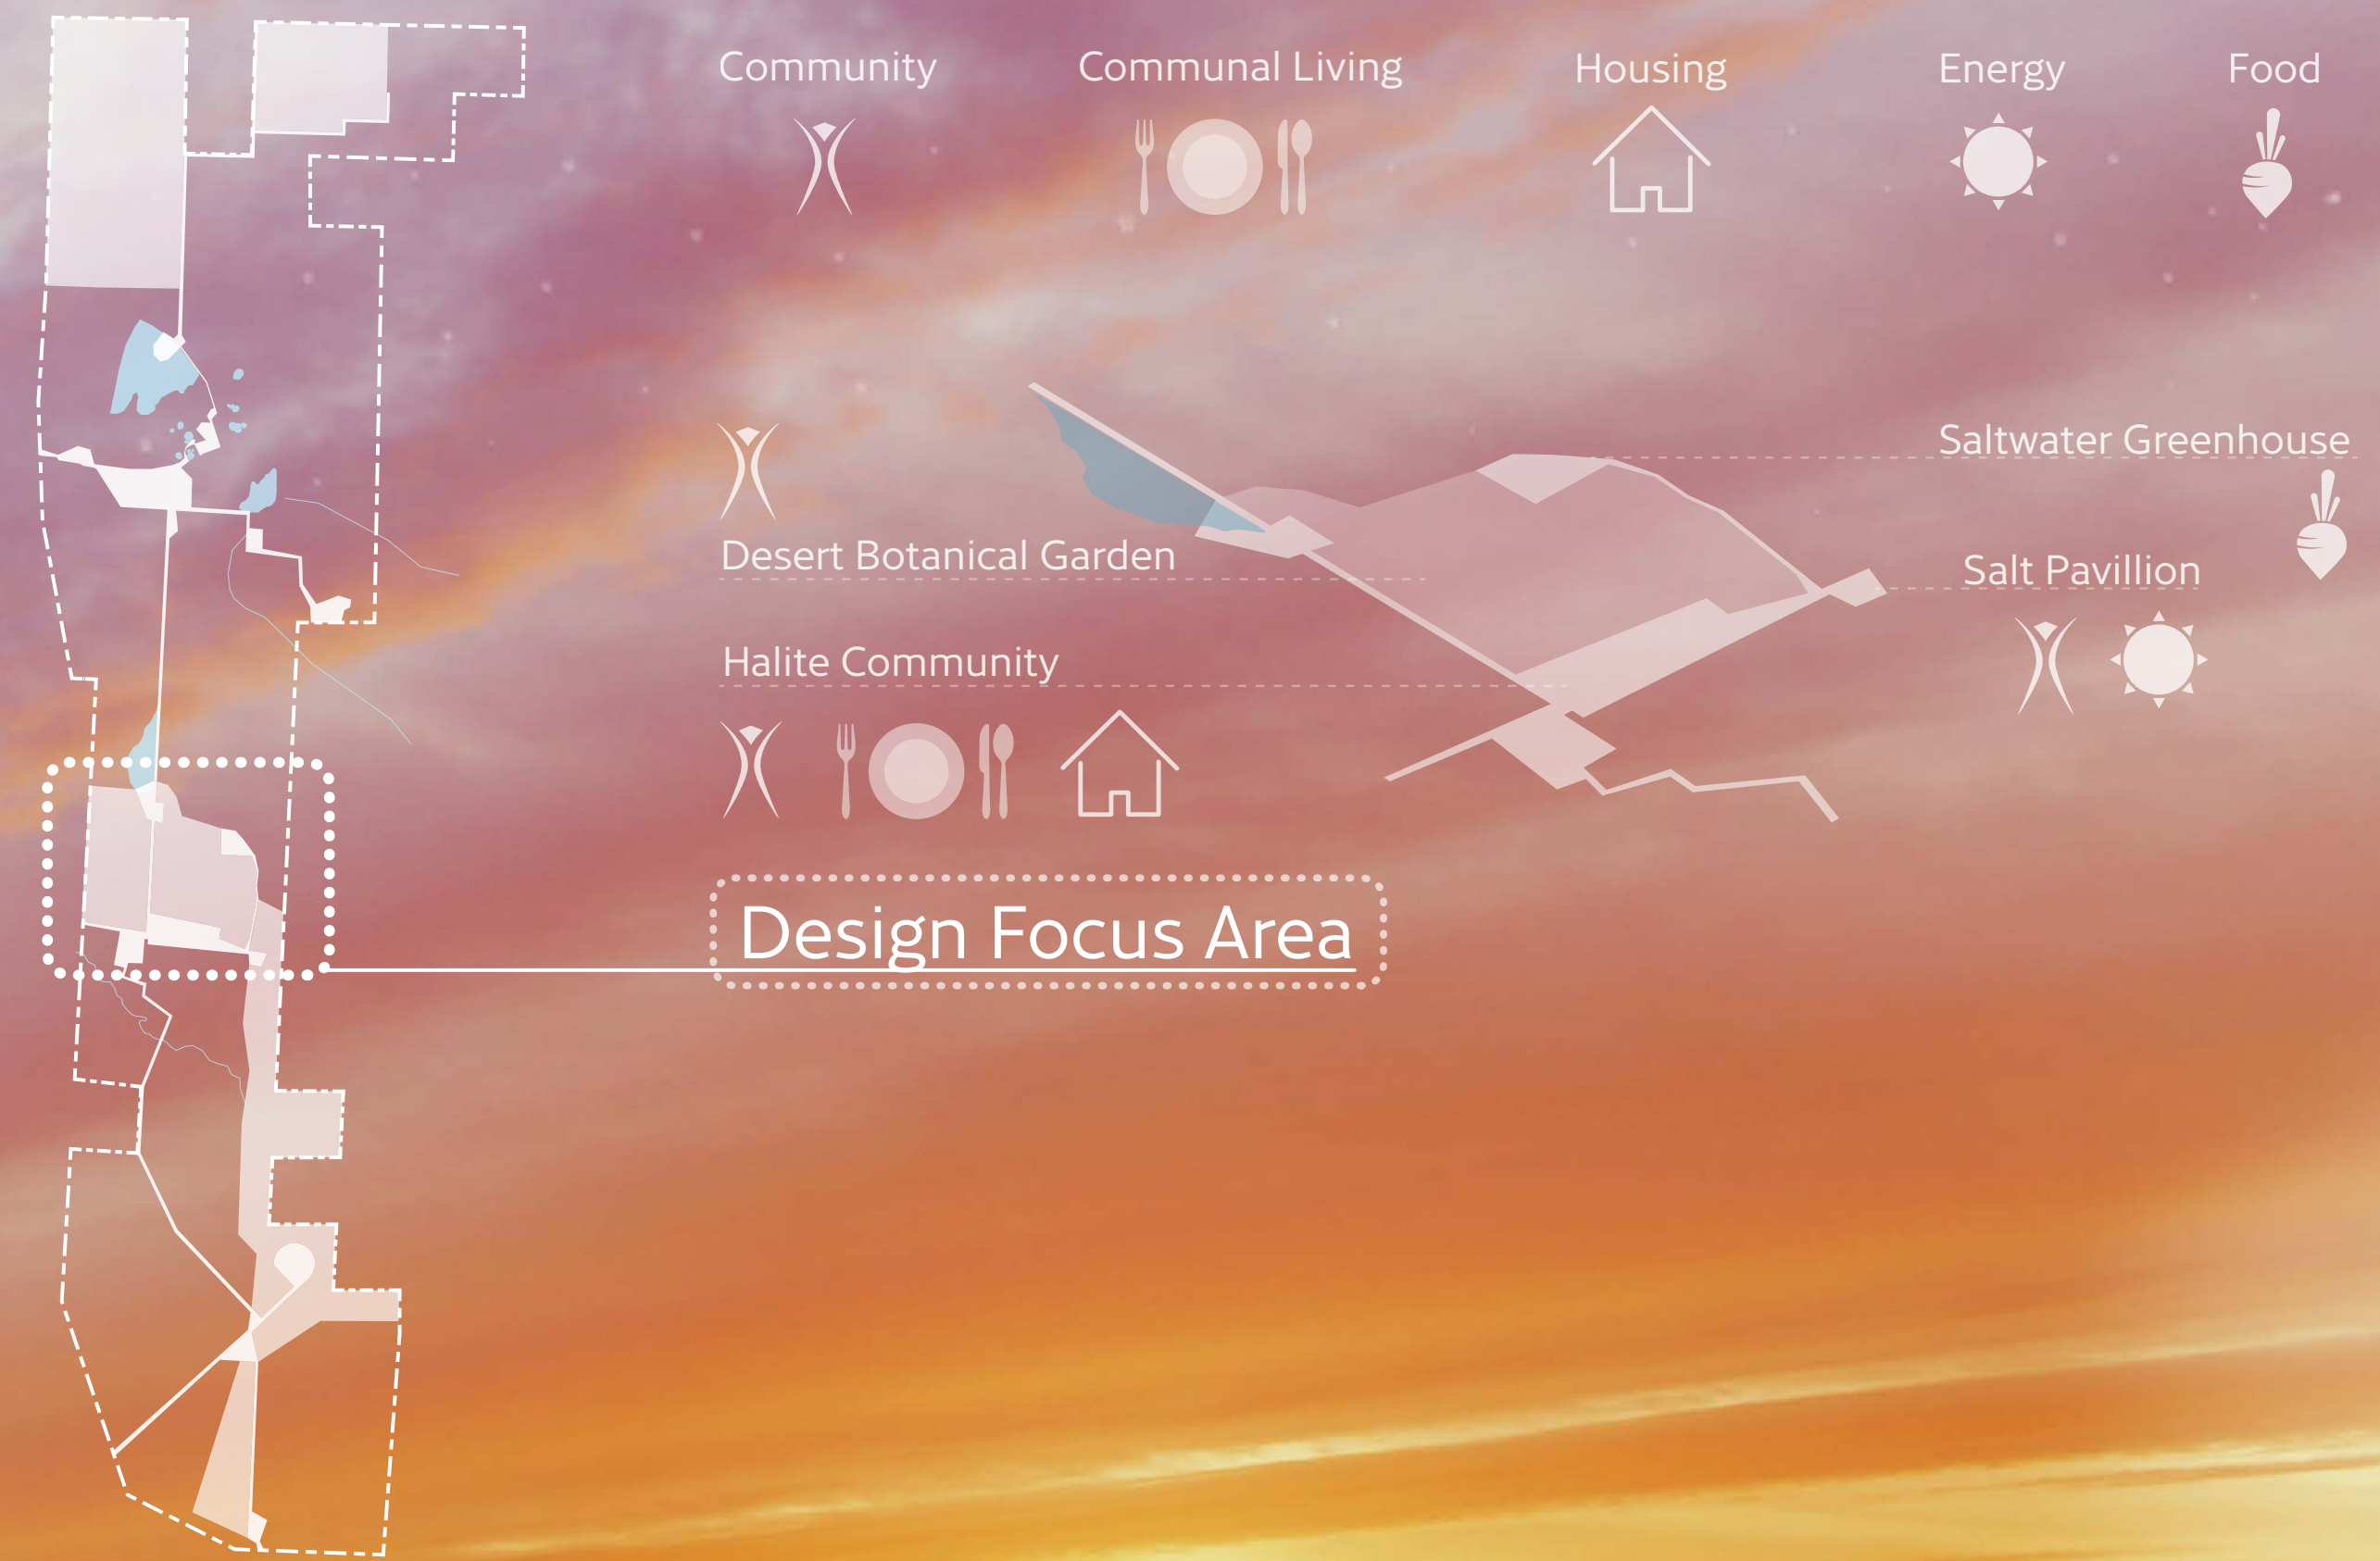

A COMMUNITY-BASED HALITE SYSTEM  
CONCEPT FOR BURNING MAN'S FLY RANCH

Under vast cerulean skies lay the remnants of the once great Lake Lahontan.

Cut off from its headwaters and severed from local aquifers, Lahontan boiled away until all that remained was its mineral precipitate, a saline fossil scarring the landscape - a playa, spanning what was once the lake bed.

Halite epitomizes regenerative growth, building off of itself, and serves as the ideal model for flexible and modular design.

*Salt Circuit* is a system which generates energy and radiates it into the attached structures on site, combining sustainable and modular design with community values and programming.
