REGENERATION, FOOD

Solar Fronds
Xue Gi, Jinfa Quaheng
POWER, SHELTER

Solar Fronds inhabit the ranch in the most delicate fashion transmitting energy whilst creating shelter and shade to sustain intricate microclimates which can nurture regenerative process. Air movement lends beautiful aural moments which engage deeper emotional connections to place.

Fly Ranch Geyser: we owe a debt of gratitude to the thermophiles: they transformed the Earth, allowing biological evolution to produce more complex organisms, and without them, humanity would not have been able to advance in biotechnology the way we have over the last few decades.
