

This project is made up of 3 parts. The first part is made up of mountains of stone, soil and compost, that create a labyrinth. In these mountains different types of plants can be grown depending on the area. In the center, a free space is generated, turning it into a social and relaxation space. The second part is made up of the columns that support the roof by small crosses, losing themselves with the trunks of the trees that surround it. Finally, the third part is made up of the roof, which is an intersection of different wooden beams. These form a kind of waffle, creating spaces for trees to grow through it.
