

TRINE HOUSING

Affordable and sustainable housing that blends in with the natural environment of Fly Ranch. Solar Panels and wind turbines are envisioned to provide renewable electricity for each individual home, plus adding to Trine's electric grid. Repurposed shipping containers reinforced with sustainable building materials will be used as base for the construction of the trine house. With minimalist aesthetics and natural day-lighting, the Trine House promises to give you the experience of feeling part of this remarkable earth's environment.

This Trine House concept consists of a 2 container layout design. The above-ground container having the living room, 1 small bathroom, and a kitchen/dining room. The underground container holds the bigger bathroom, and the sleeping room.
