

Permaculture design for the people.

LEADER FISHY

The leader fish house is a permaculture design inspired fish shaped dwelling. It can be tailored for any part of the environment and can have a multiplicity of sizes from tiny fish homes to multi person units.

The materials are easily available in most areas of the world as it includes, straw and straw bales, local clay deposits, framing wood up cycled from the BURN, large flat stones, and then the usual cast of regular fixtures, It also has either or solar shingles, a composting toilet, grey water remediation, living roof, and pole wind turbines, they may also contain shipping container basement/ foundation, water catchment, pond, greenhouse, trumb walls, solar water heated floors, cob walls and stone floors with locally sourced building materials.
