Autonomous Farming System of fish-vegetable symbiosis

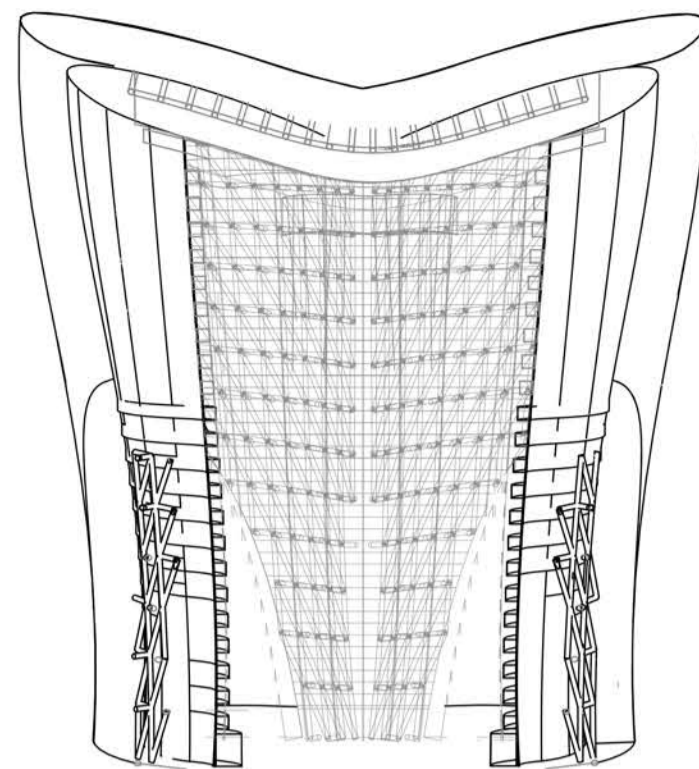

**Water**  
Zero-pollution self-circulating water treatment system

**Regeneration / Re-Composition (Zero-waste)**  
Zero-pollution self-circulating water treatment system

Organization grid layout

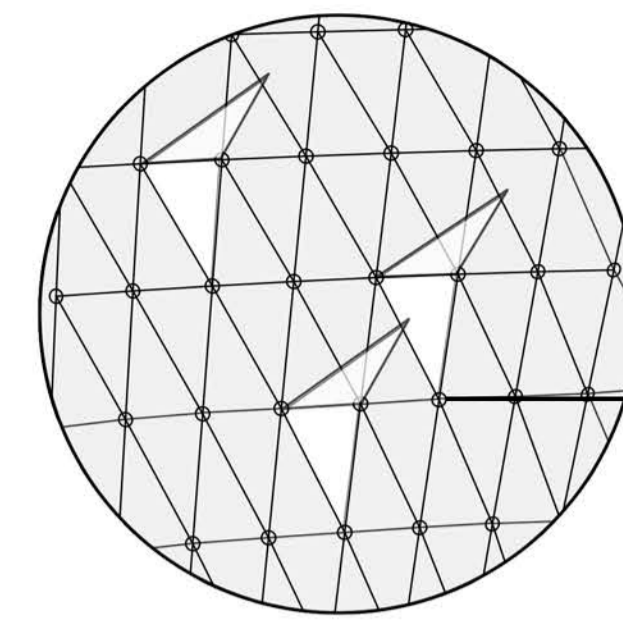

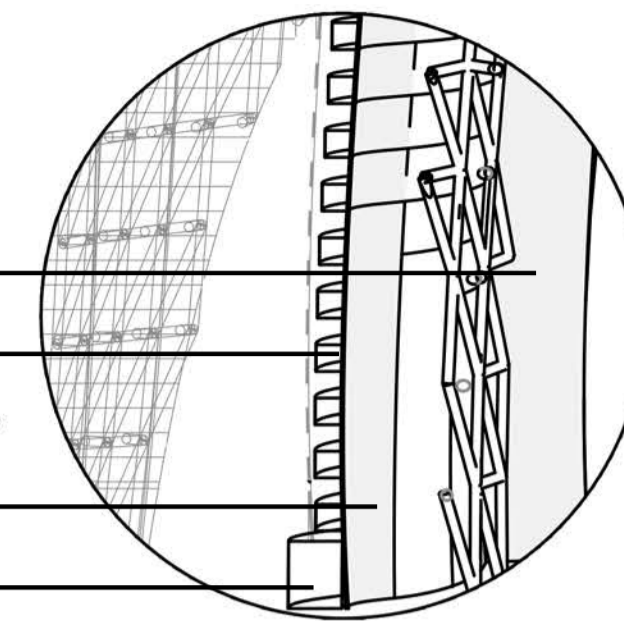

Entrance

Planting tank

Steel frame structure

Insulating Layer

Fish Pond

translucent solar photovoltaic

Adjustable unit

**Solar Energy**  
350 MWh annual capacity

# CACTUS LEGEND

Cactus Legend is located between the place where the Burning Man Festival is held and the urban area. The goal is to establish connections with the city by accumulating energy and agricultural products through spontaneous circular development here, establishing a public space development network, and attracting tourists to come to visit and travel through new agricultural methods. To achieve the goal of long-term development here, and provide continuous energy supply for the future Burning Man Festival.
