

the aerial tambo

Capable of conceiving a new
way of inhabiting the territory

TAMBO stands for those shelters
where the andean chasquis stopped to
rest and recharge in the Incan network.
Our system pinpoints vertical
architecture that promotes circular
economy by reusing enviromental
resources for the production of food
based on zero waste guidelines,
striving toward new rules for territory
occupation that addresses the
LAGI five principles.

+7.00

Top level: a nice shelter
to stay, a green house to
harvest our own food and
several solar panels to
supply us with energy

+4.70

Three fully equipped
bathrooms to
recharge energy

+3.20

Water treatment
tanks level. You just
keep on going up!

0.00

So here we start.
First stop, a vetiver
plant treatment pool
to process black
waters we produce
