

SYMBIOSIS

A proposal for Positive Impact Architecture.

The Concept.

The intention of this proposal is to provide a flexible and sustainable product that can shelter all kinds of experiences in Fly Ranch guided by Burning Man culture. The sustainable design of this product is concerned with maintaining quality of life by assembling prefabricated elements and respecting the natural environment by not altering it. This concept developed in an ephemeral prospective will claim back the works of nomadic cultures.

Thanks to its modular and prefabricated architecture, Symbiosis is easy to transport, easy to repair and easy to assemble. In the same way, once the installation is no longer needed, it can be easily disassembled, transported, or even recycled. All this possible for its low-cost, eco-friendly, and replicable design.
