

COMMUNITY

The concept is inspired by the natural wisdom of fungi. The essence of the fungal network is the **adaptability, communication and symbiosis**.

It is a principle which can be taught to locals and will persist in the community in the **form of knowledge**.

This principle emphasizes the importance of the **existing environment** by non-invasive respectfull construction allowing flexible response to the environmental changes.

It is our goal to make the Fly Ranch community aware of the need of a harmonious coexistence with the environment and to perceive changes and characteristics of the place as perceived by the **former inhabitants**.

SUMMER

When needed, Fly Ranch can **expand** by easily assambled network of light structures.

WINTER

Only the **necessary** structures. The rest can be easily recycled or used for heating.
